SECURING HOMES, ONE AT A TIME.

RESIDENTIAL SECURITY

LOCALLY OWNED AND OPERATED

Use this area to tell your company story. Photo can be your facility, or CEO delivering a personal message. Image should be high resolution, horizontal format, measuring at least 4"x2.75" in size.

Text should be a minimum of 100 and maximum of 135 words. Copy should be specific to your organization, highlighting traits that make your company desirable, such as longevity, location and special services.

As an example: For over 50 years, generations of families and businesses in the Tucson area have counted on ANY Security Company to provide security they can trust. Our state-of-the-art central station monitors their homes and businesses 24-hours a day, seven days a week. And because we're located here in your hometown, you can rest easy knowing that we're here when you need us.

Home is the place where you are most comfortable and secure. It's your safe haven from the world. But even at home there are dangers.

For some, there's the threat of break-ins and burglaries. For everyone, there's the chance of fire or other emergencies. Thanks to advances in technology, today's alarm systems are not only incredibly efficient and accurate, but so simple a child can use them.

FULL TIME SECURITY

Your security system is like a personal 24 hour sentry. It's always on duty, always vigilant, and always ready to sound an alarm at the first sign of danger. When your system is monitored, it will also alert your emergency responders that help is needed. Whether you're awake or asleep, at home or away, your home is protected. Many insurance companies offer savings on premiums when your system is monitored.

Any Security Company's systems are modular, created from a variety of components, providing you with different levels of protection. Depending on your needs, your system may include:

- ◆ Smoke and fire sensors
 - ◆ Glass break sensors
- Sensors are the eyes and ears of your system. They detect motion, body heat, or breaking glass, and signal the control panel.*

- ◆ Interior/exterior motion detectors
- ◆ Window and door switches

DESIGNED FOR YOU

Because systems are modular, you can specify exactly the level of security you want. Once installed, your system is programmable to customize it to your lifestyle. There are even pet-immune detectors that allow your dog to wander the house without tripping the alarms.

You can program your system to sound an alarm inside and outside the home to alert you and the neighbors, while startling any intruders. When your system is monitored, it will notify your alarm monitoring service, which will then alert the appropriate authorities or a private security response firm.

FEATURES YOU WILL APPRECIATE

Almost any system can provide basic protection from burglary and fire. Our systems offer additional features, some standard and some optional, that make systems easier to use while enhancing security.

CODELESS ENTRY: Instead of entering a code on the keypad, just wave your key fob next to the keypad to turn the system on or off.

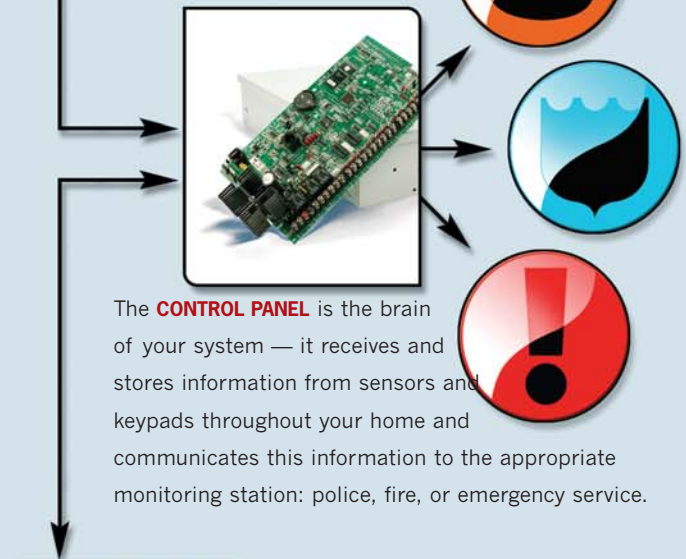

FALSE ALARM REDUCTION: False alarms annoy neighbors and may result in fees from your emergency responders. ANY Security Company alarm systems include special features that reduce false alarms.

UNDERSTANDING YOUR SECURITY SYSTEM

A security system does not have to be complicated. Let our certified professionals walk you through the user-friendly operation.

The **KEYPAD** is the link between you and your system. It's used to select the amount of security desired and to check system status via easy-to-read displays using simple function keys.

The **CONTROL PANEL** is the brain of your system — it receives and stores information from sensors and keypads throughout your home and communicates this information to the appropriate monitoring station: police, fire, or emergency service.

SENSORS/DEVICES are the eyes and ears of your system. They detect motion, body heat, or breaking glass, and signal the control panel.

- ◆ Sensors on doors and windows and motion detectors alert you of intrusion
- ◆ Smoke detectors are on 24-hour alert to detect fire, whether you're home, asleep, or away
- ◆ Wireless accessories offer remote

THE PRICE OF SECURITY

Residential alarm systems are more affordable than ever. You may be surprised at how much security you can afford.

And because your alarm system will be custom- designed for your home, you can pick and choose the components you want to provide the level of safety and convenience you desire at a price that matches your budget.

Invest in a home security system, and you and your family will never be alone in an
