# **Product Specifications Summary**

1.1 Power Supply

Transformer Input: Model 324INT wire-in — Primary input: 230 VAC, 50 Hz, Secondary output: 18 VAC 100

VA, 400 mA

Standby Battery: 12 VDC, 1.0 Amps Max. charging current

Models 365, 366, 368, or 369 Replace every 3 to 5 years 12 VDC output at 1.5 Amp Max

Auxiliary: 12 VDC output at 1.5 Amp Ma

Bell Output: 12 VDC at 1.5 Amp Max

All circuits are inherent Power Limited except the red battery wire and AC terminal.

### 1.2 Communication

• Built-in network communication to DMP Model SCS-1R or SCS-VR Receivers

- Built-in Contact ID communication to DMP Model SCS-1R Receivers
- · Can operate as a local panel

### 1.3 Panel Zones

- Eight 1k Ohm EOL/Dual EOL burglary zones (zones 1 to 8)
- Two 3.3k Ohm EOL powered zone with reset (zones 9 and 10)

### 1.4 Keypad Bus

You can connect up to a total of 16 of the following supervised keypads and expansion modules to keypad bus:

- Alphanumeric keypads
- · One, four, eight, and sixteen-zone expansion modules
- Wireless Keypads (maximum of 7)

### 1.5 LX500-LX900 Bus™

You can connect the following devices to the LX-Bus<sup>™</sup> connections provided on the panel. See Accessory Devices section 3.3.

- · Four, eight, sixteen- and/or single-zone expansion modules
- Relay output expansion modules
- · Graphic annunciator modules

### 1.6 Outputs

The XR150INT/XR550INT Series panels provide two Single Pole, Double Throw (SPDT) relay outputs which require the installation of two Model 305 relays, each rated 1 Amp at 30 VDC resistive (power limited sources only).

A Model 431 Output Harness is required to use these outputs.

The XR150INT/XR550INT Series panels also provide four open collector outputs rated for 50mA each. The open collector outputs provide ground connection for a positive voltage source. A Model 300 Output Harness is required to use these outputs.

### PANEL SPECIFICATIONS

### 1.7 Enclosure Specifications

The XR150INT/XR550INT Series panels are shipped in an enclosure with a transformer, End-of-Line resistors, battery leads, user guide, and programming sheets.

Enclosure Model	Size	Color(s)	Construction (Cold Rolled Steel)
350INT	44.45 W x 34.29 H x 8.89 D cm	Gray (G) or Red (R)	18-Gauge
350AINT	44.45 W x 34.29 H x 8.89 D cm	Gray (G)	18-Gauge with 16-Gauge door
349INT	31.75 W x 29.21 H x 8.89 D cm	Gray (G)	20-Gauge
352PINT	36.83 W x 81.28 H x 10.16 D cm	Gray (G)	16-Gauge
352XINT	36.83 W x 81.28 H x 10.16 D cm	Gray (G)	16-Gauge

# **Panel Features**

### 2.1 Description

The DMP XR150INT/XR550INT Series system is made up of an alarm panel with a built-in communicator, an enclosure, battery, one transformer, and keypads. Each panel is a versatile 12VDC, combined access control, burglary, and fire communicator panel with battery backup. The panels provide eight on-board burglary zones and two on-board 12 VDC Class B powered zones. The powered zones have a reset capability to provide for 2-wire smoke detectors, relays, or other latching devices. Combined current requirements of additional modules may require an auxiliary power supply. Refer to the Power Requirements section in this guide when calculating power requirements. The panels can communicate to DMP SCS-1R Receivers using digital dialer, cellular, network, or Contact ID communication. Panels using cellular, network, or encrypted communication can also communicate to DMP SCS-VR Receivers.

### 2.2 Zone Expansion

Each panel provides multiple options for zone expansion:

- 10 on-board zones
- Up to 64 programmable keypad zones
- Up to 500 LX-Bus zones

Using DMP LCD keypad remote zone capability and zone expansion modules, additional zones are available on each panel:

- XR550INT provides up to 574 additional zones
- XR150INT provides up to 142 additional zones

The panel keypad data bus supports up to 16 supervised device addresses with each address supporting up to four programmable expansion zones (64 total).

Using the on board LX-Bus™ connections, and any combination of single, four, eight, or sixteen-zone expansion modules and single-zone LX-Bus™ detectors, additional zones are available on each panel:

- XR550INT provides up to 500 additional zones (LX500-LX900)
- XR150INT provides up to 100 additional zones (LX500)

**Note:** Do not use shielded or twisted pair wiring for LX-Bus or Keypad Bus circuits.

# 2.3 Output Expansion

In addition to the two SPDT relays and four programmable open collector outputs on the XR150INT/XR550INT Series panels, you can also connect up to 25 programmable Model 716 Output Expansion Modules to each LX-Bus. These modules can provide an additional 500 or 100 programmable SPDT relays.

The panels provide Output Schedules for programming the 716 to perform a variety of annunciation and control functions. Also assign the 716 outputs to any panel Output Options such as Fire Alarm, Communication Fail, or Phone Trouble Outputs. Refer to the 716 Installation Guide (LT-0183).

### 2.4 Central Station Communication

You can program the panel for reporting to DMP SCS-VR or SCS-1R Receivers using digital dialer, cellular, network, or Contact ID communication. The panels connect at the premises to a standard RJ31X or RJ38X telephone jack.

### PANEL SPECIFICATIONS

### 2.5 Caution Notes

Throughout this guide you will see caution notes containing information you need to know when installing the panel. These cautions are indicated with a yield sign. Whenever you see a caution note, make sure you completely read and understand its information. Failing to follow the caution note can cause damage to the equipment or improper operation of one or more components in the system. See the example shown below.

Always ground the panel before applying power to any devices: The panel must be properly grounded before connecting any devices or applying power to the panel. Proper grounding protects against Electrostatic Discharge (ESD) that can damage system components.

### 2.6 Compliance Instructions

For applications that must conform to a local authorities installation standard or a National Recognized Testing Laboratory certificated system, please see the Compliance Listing Guide LT-1330INT for additional instructions.

# **System Components**

## 3.1 Specific and Non-specific Wired Interconnections

The XR150INT/XR550INT Series panels diagram below shows some of the accessory modules you can connect for use in various applications. A brief description of each module follows in section 3.3.

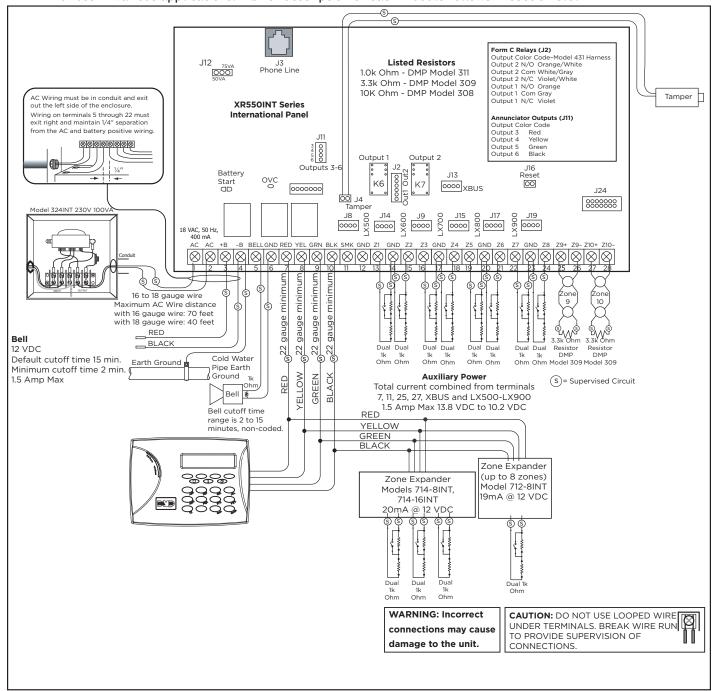

Figure 1: XR550INT Series Wiring Diagram

### 3.2 Lightning Protection

Metal Oxide Varistors and Transient Voltage Suppressors help protect against voltage surges on panel input and output circuits. Additional surge protection is available by installing the Model 270 Network Transient Suppression Module.

### 3.3 **Accessory Devices**

Cellular Communicator Cards	
263LTE-INT-A	Allows you to connect the XR150INT/XR550INT Series panels to any compatible LTE network.
Accessory Modules	
270INT Network Transient Suppression Module	Provides transient surge protection for the ETHERNET Connector.
Expansion Modules	
710INT Bus Splitter/Repeater	Allows you to increase keypad or LX-Bus™ wiring distance to 2500 feet.
714-8INT, 714-16INT Zone Expanders	Provides Class B zones for connecting burglary and non-powered fire devices.
712-8INT Zone Expander	Provides Class B zones for connecting burglary devices.
716INT Output Expander	Provides four Form C relays (SPDT) and four switched grounds (open collector) for use in a variety of remote annunciation and control applications for use on the LX-Bus only.
734INT, 734NINT Access Control Modules	Provides system codeless entry, and arming and disarming using access control readers.
DMP Two-Way Wireless Devices	•
1100XINT Receiver	Supports up to 500/100 devices in residential or commercial wireless operation.
1100RINT Repeater	Provides additional range for wireless devices.
1103INT Universal Transmitter	Provides both internal and external contacts that may be used at the same time to yield two individual reporting zones from one wireless transmitter. Requires EOL resistor for external contact. Provides Disarm/Disable functionality.
1122INT PIR Motion Detector	Provides motion detection with pet immunity.
1128INT Wireless Glassbreak Detector	Provides fully-supervised, low current shock and glassbreak detection coverage up to 20 ft.
1142BCINT Two-button Hold-up Belt Clip Transmitter	Provides two-button hold-up operation with a belt clip.
1142INT Two-button Hold-up Transmitter	Provides permanently mounted under-the-counter two-button hold-up operation.
1144-4INT (Four-Button) 1144-2INT (Two-Button) 1144-1INT (One-Button)	Key Fob transmitters designed to clip onto a key ring or lanyard.
Interface Modules	
738Z+INT Z-Wave Interface Module	Provides connection for Z-Wave modules.
Indicating and Initiating Devices	·
860INT Relay Module	Provides dry relay contacts that are programmable and controlled from the DMP panel annunciator outputs. Includes one Form C (SPDT) relay rated 1 Amp @ 30VDC. Sockets are provided to allow the addition of three Model 305 plug-in relays. These relays can be used for electrical isolation between the alarm panel and another system or switching 5, 12, or 24 Volts to control various functions within a building or around its perimeter.
Keypads	
LCD keypads	Allows you to control the panel from various remote locations. Connect up to sixteen Model 7060-WINT, 7063-WINT, 7073-WINT, Thinline™ keypads, or the 7872-WINT and 7873-WINT Graphic Touchscreen keypads to the keypad bus using terminals 7, 8, 9, and 10.
Wireless keypads	Allows you to control the panel from various remote locations. Connect up to seven 9862-WINT Wireless Graphic Keypads.

# **Installation**

### 4.1 Mounting the Enclosure

The metal enclosure for the XR150INT/XR550INT Series panels must be mounted in a secure, dry place to protect the panel from damage due to tampering or the elements. It is not necessary to remove the panel PCB when installing the enclosure. Figure 2 shows the mounting hole locations for the Model 350INT/350AINT Enclosures. Figure 3 shows the Model 352PINT panel cabinet and 352S shelf cabinet for multiple batteries. The 350AINT Attack Resistant enclosure is factory shipped with one knockout on the top left of the enclosure. As needed, additional knockouts or antenna exits may be added at the time of installation. See Figure 2 for the positions on the enclosure that can be added. Each additional knockout must be filled with conduit.

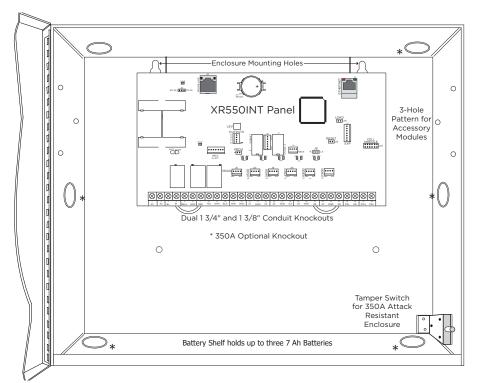

Figure 2: XR550 International Series panel in Model 350 or 350A Enclosure

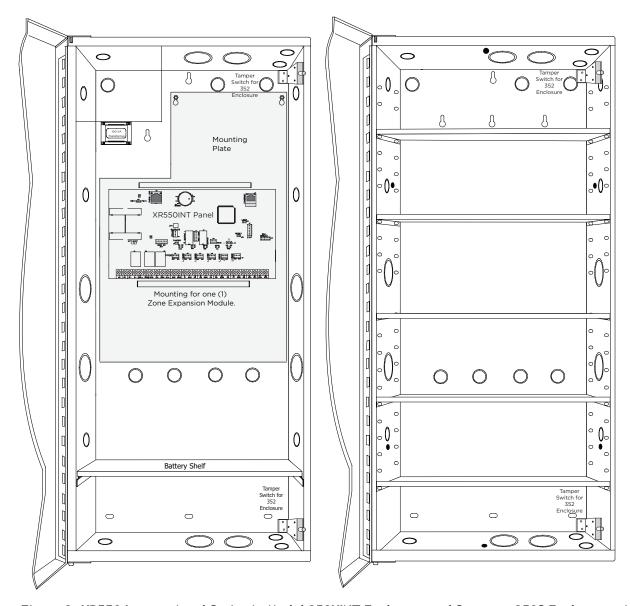

Figure 3: XR550 International Series in Model 352XINT Enclosure and Separate 352S Enclosure with Shelves

# 4.2 Mounting Keypads and Zone Expansion Modules

DMP LCD keypads have removable covers that allow you to easily mount the keypad to a wall or other flat surface using the screw holes on each corner of the base. Before mounting the base, connect the keypad wire harness leads to the keypad cable from the panel and to any device wiring run to that location. Then attach the harness to the pin connector on the PC board, mount the base, and install the keypad cover making sure all of the keys extend through their respective holes.

For mounting keypads on solid walls, or for applications where conduit is required, use the Model 695 1-1/2" deep or the Model 696 1/2" deep backboxes.

The DMP 716 module is contained in a molded plastic housing with a removable cover. The base provides you with mounting holes for installing the unit to a wall, switch plate, or other surface.

The DMP 712-8INT module may be mounted inside the panel enclosure using the 3-hole pattern and plastic standoffs.

The DMP 714-8INT, and 714-16INT modules are contained in a DMP Model 340 enclosure.

#### 4.3 Connecting LX-Bus<sup>™</sup>, AX-Bus<sup>™</sup> and Keypad Bus Devices

Connections for LX-Bus/AX-Bus and Keypads are provided through the PROG, LX500, LX600, LX700, LX800, and LX900 4-pin headers and the keypad bus. Several factors determine the DMP LX-Bus/AX-Bus and keypad bus performance characteristics: the wire length and gauge used, the number of devices connected, and the voltage at each device. When planning an LX-Bus/AX-Bus and keypad bus installation, keep in mind the following information:

- 1. DMP recommends using 18 or 22-gauge unshielded wire for all LX-Bus/AX-Bus and keypad circuits. Do not use twisted pair or shielded wire for LX-Bus/AX-Bus and keypad bus data circuits.
- 2. On keypad bus circuits, to maintain auxiliary power integrity when using 22-gauge wire do not exceed 500 feet. When using 18-gauge wire do not exceed 1,000 feet. To increase the wire length or to add devices, install an additional power supply that is listed for Fire Protective Signaling, power limited, and regulated (12VDC nominal) with battery backup.
  - Note: Each panel allows a specific number of supervised keypads. Add additional keypads in the unsupervised mode. Refer to the Keypad Bus section for the specific number of supervised keypads allowed.
- 3. Maximum distance for any one bus circuit (length of wire) is 2,500 feet regardless of the wire gauge. This distance can be in the form of one long wire run or multiple branches with all wiring totaling no more than 2,500 feet. As wire distance from the panel increases, DC voltage on the wire decreases. Maximum number of LX-Bus/AX-Bus devices on the first 2.500 foot circuit is 40 devices.
- 4. Maximum voltage drop between the panel (or auxiliary power supply) and any device is 2.0VDC. If the voltage at any device is less than the required level, add an auxiliary power supply at the end of the circuit. When voltage is too low, the devices cannot operate properly.

For additional information refer to the LX-Bus/AX-Bus/Keypad Bus Wiring Application Note (LT-2031).

#### 4.4 **Wireless Keypad Association**

### **Program from any Keypad Address**

You can program the panel from any 32-character wireless keypad or hardwired keypad connected to the panel's keypad data bus.

### Program from any Wireless Keypad

To enable association operation on a Wireless Graphics Touchscreen keypad (Model 9862INT), access the Options menu through the carousel menu. While in the Options display, press the Installer Options icon. Enter the code 3577 (INST) and press CMD. Press KPD RF to start the RF survey communication. The keypad displays its wireless serial number and RF SURVEY.

To enable wireless keypad association operation, reset the panel three times allowing the keypad bus transmit light to begin flashing between each reset.

For 60 seconds the panel listens for wireless keypads that are in RF Survey mode and have not been programmed or associated into another panel. When the keypad associates with the panel the keypad logo LED turns from Red to Green.

open device position in Device Setup automatically based upon the order in which they are detected.

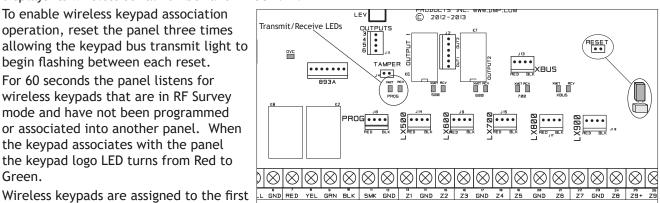

Figure 4: XR550 International Series Panel Showing Reset and Transmit/Receive

# **Primary Power Supply**

### 5.1 AC Terminals 1 and 2

Connect the transformer wires to terminals 1 and 2 on the panel. Use no more than 70 ft. of 16 gauge or 40 ft. of 18 gauge wire between the transformer and the panel.

Always ground the panel before applying power to any devices: The XR150INT/XR550INT Series panels must be properly grounded before connecting any devices or applying power to the panel. Proper grounding protects against Electrostatic Discharge (ESD) that can damage system components. See the Earth ground section.

### 5.2 50VA-75VA 3-Pin Header for Transformer Types

Place the jumper on the right two pins labeled 75VA for a Maximum 3 Amp (Bell+Aux+Smoke+XBUS+LX500-LX900) when using the Model 324INT 100 VA wire-in transformer.

# **Secondary Power Supply**

### 6.1 Battery Terminals 3 and 4

Connect the black battery lead to the negative battery terminal. The negative terminal connects to the enclosure ground internally through the XR150INT/XR550INT Series panels circuit board. Connect the red battery lead to the battery positive terminal. Observe polarity when connecting the battery.

You can add a second battery in parallel using the DMP Model 318 Dual Battery Harness.

DMP requires each battery be separated by a PTC in the battery harness wiring to protect each battery from a reversal or short within the circuit. See Figure 5.

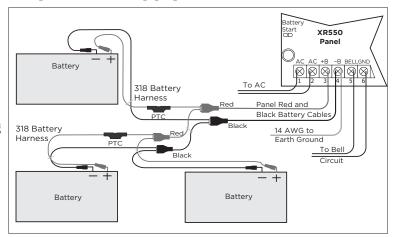

Figure 5: Wiring Multiple Batteries

Use sealed lead-acid batteries only: Use the DMP Model 364 (12 VDC 1.3Ah), Model 365 (12 VDC 9 Ah), Model 366 (12 VDC 18 Ah), Model 368 (12 VDC 5.0 Ah), or Model 369 (12 VDC 7 Ah) sealed lead-acid rechargeable battery. Batteries supplied by DMP have been tested to ensure proper charging with DMP products.

GEL CELL BATTERIES CANNOT BE USED WITH THE XR150INT/XR550INT SERIES PANEL.

# 6.2 Earth Ground (GND)

When powering up the panel, terminal 4 can be connected to earth ground (if available) using 14 gauge or larger wire. Additional options are cold water pipe or ground rod. Gas pipes or sprinkler pipes should not be used. Do NOT CONNECT TO AN ELECTRICAL GROUND OR SERVER RACK. A ground connection is not required to provide normal system operation.

# 6.3 Battery Only Restart

When powering up the XR150/XR550 International Series panel without AC power, briefly short across the battery start pads to pull in the battery cutoff relay. The leads need a momentary short only. Once the relay has pulled in, the battery voltage holds it in that condition. If the XR150/XR550 International Series panel is powered up with an AC transformer, the battery cutoff relay is pulled in automatically. For more information refer to Figure 1.

# **6.4 Battery Replacement Period**

DMP recommends replacing the battery every 3 to 5 years under normal use.

# 6.5 Discharge/Recharge

The XR150INT/XR550INT Series panels battery charging circuit float charges at 13.8 VDC at a maximum current of 1.5 Amps using a 100 VA transformer. Listed below are the various battery voltage level conditions:

Battery Trouble: Below 11.2VDC
Battery Cutoff: Below 10.2VDC
Battery Restored: Above 12.6VDC

### INSTALLATION

### 6.6 Battery Supervision

The XR150INT/XR550INT Series panels tests the battery when AC power is present. The test is done every three minutes and lasts for five seconds. During the test, the panel places a load on the battery; if the battery voltage falls below 11.2 VDC a low battery is detected. If AC power is not present, a low battery is detected any time the battery voltage falls below 11.2 VDC.

If a low battery is detected with AC power present, the test repeats every two minutes until the battery charges above 12.6 VDC indicating the battery has restored voltage. If a weak battery is replaced with a fully charged battery, the restored battery will not be detected until the next two minute test is completed.

### 6.7 Battery Cutoff

The panel disconnects the battery any time the battery voltage drops below 10.2 VDC. This prevents battery deep discharge damage.

### **6.8 Power Requirements**

During AC power failure, the XR150INT/XR550INT Series panel and all connected auxiliary devices draw their power from the battery. All devices must be taken into consideration when calculating the battery standby capacity. The following table lists the XR150INT/XR550INT Series panel power requirements. You must add the additional current draw of keypads, zone expansion modules, smoke detector output, and any other auxiliary devices used in the system for the total current required. The total is then multiplied by the number of standby hours required to calculate the total ampere-hours required.

Standby Battery Power Calculations		Standby Current	Alarm Current

Refer to section 6.9 for standby battery selection.

### **6.9 Standby Battery Selection**

To choose the type and number of batteries needed for 24, 60, or 72 hours of standby power based on the Amp Hours Required calculation from section 6.8 XR150INT/XR550INT Series Power Requirements, perform the following:

- 1. Select the desired standby hours required from the table below: 24, 60, or 72 hours
- 2. Select the desired battery size: Model 368 (12 VDC 5.0 Ah), Model 369 (12 VDC 7 Ah), Model 365 (12 VDC 9 Ah), Model 366 (12 VDC 18 Ah).
- 3. Select a Max. Ah Available number that is just greater than the number calculated in Amp Hours Required.
- 4. Install the number of batteries shown in the corresponding No. of Batteries required column.

**Example:** If the Amp Hours Required calculation equals 22 Ah for 24 hours of standby time and 5.0 Ah batteries are desired, install six (6) Model 368 (12 VDC, 5.0 Ah) batteries.

**Note:** The Model 324INT Wire-in 100 VA Transformer may be used with any of the battery choices listed below.

For listed installations, batteries can be installed in a DMP Model 349, 350 or 352S enclosure and all wiring shall run through conduit. The enclosure shall be installed to the left of the XR150INT/XR550INT Series panel enclosure to ensure Battery and AC wire separation.

Available	<b>Batteries</b>				
16	1				
33	2				
50	3				
67	4				

**Note:** 72 hours is the typical battery recharge time required for any of the Number of Batteries shown in this section.

**Note:** If the Amp Hours Required calculation is greater than any Max. Ah Available number shown on a table, then add power supply(s) to power some system devices allowing the Amp Hours Required calculation to be reduced. See the 710 Bus Splitter/Repeater Installation Guide (LT-0310).

# **Bell Output**

#### 7.1 Terminals 5 and 6

Terminal 5 supplies positive 12 VDC to power alarm bells or horns. This output can be steady, pulsed, or temporal depending upon the Bell Action specified in Bell Options. Terminal 6 is the ground reference for the bell circuit. This supervised output detects 1k Ohms or less as normal. The indicating appliance can supply this resistance. If using a horn or siren, a 1k Ohm 1/2 W EOL resistor (provided) should be added across the bell circuit to provide supervision. See the Notification Appliance section for a list of approved notification appliances and the Wiring Diagrams for connections.

# **Keypad Bus**

#### 8.1 Description

XR150INT/XR550INT Series panel terminals 7, 8, 9, and 10 are for the keypad bus. You can connect up to 16 supervised keypads to the XR550INT Series panel and 8 supervised keypads to the XR150INT Series panel as well as multiple unsupervised keypads. In addition to DMP LCD keypads, you can also connect any combination of zone expansion modules to the data bus up to a total of 16 devices.

Note: Do not use shielded wire for LX-Bus/Keypad Bus circuits.

#### 8.2 **Terminal 7 - RED**

This terminal supplies positive 12 VDC Regulated to power DMP LCD keypads and zone expansion modules. Terminal 7 also supplies power for any auxiliary device. The ground reference for terminal 7 is terminal 10. The output current is shared with the smoke power output on terminal 11 and Zones 9 and 10. Current draw for all connected devices must not exceed the panel maximum current rating. See Power Supply in the Compliance section for maximum current in a fire listed application.

#### 8.3 **Terminal 8 - YELLOW**

Terminal 8 receives data from keypads and zone expansion modules. It cannot be used for any other purpose.

#### 8.4 **Terminal 9 - GREEN**

Terminal 9 transmits data to keypads and zone expansion modules. It cannot be used for any other purpose.

#### 8.5 **Terminal 10 - BLACK**

Terminal 10 is the ground reference for DMP LCD keypads, zone expansion modules, and all auxiliary devices being powered by terminal 7.

#### 8.6 **Programming (PROG) Connection**

The 4-pin PROG header is provided to connect a keypad when using a DMP Model 330 Programming Cable.

This provides a quick and easy connection for panel programming.

You may also use the PROG header to connect Keypad Bus devices. This is an alternative to connecting keypad bus devices to terminals 7, 8, 9, and

**Note:** The programming keypad must be set to address 1.

#### 8.7 **Keypad Bus LEDs**

The two LEDs, located above the PROG header, indicate data transmission and receipt. The left LED flashes green to indicate the panel is transmitting keypad bus data. The right LED flashes yellow to indicate the panel is receiving keypad bus data. See Figure 6.

#### 8.8 OVC LED(s)

Figure 6: PROG Header and LEDs

XMT RCV

The Overcurrent LED (OVC) lights Red when the devices connected to the Keypad Bus and LX-Bus(es) draw more current than the panel is rated for. The LED(s) turn a steady Red when lit. When the OVC LED(s) light Red, the appropriate LX-Bus(es) and Keypad bus are shut down.

- The OVC LED located to the left of the 893A connector indicates overcurrent for the Keypad Bus (Terminals 7-10 and PROG header), XBUS, and LX500-LX700.

# **Smoke and Glassbreak Detector Output**

### 9.1 Terminals 11 and 12

Terminal 11 supplies positive 12 VDC Regulated to power 4-wire smoke detectors and other powered devices. This output can be turned off by the user for 5 seconds using the Sensor Reset User Menu option to allow latched devices to reset. Terminal 12 is the ground reference for terminal 11.

### 9.2 Current Rating

The Output current from terminal 11 is shared with terminals 7, 25, 27, and LX500-LX900.

The total current draw of all devices powered from the panel must be included with terminal 11 calculations and must not exceed the maximum output rating.

### **Protection Zones**

### 10.1 Terminals 13-24

Zones 1 to 8 (terminals 13 to 24) on the XR150INT/XR550INT Series panel are all grounded burglary zones. For programming purposes, the zone numbers are 1 through 8. Listed below are terminal 13 to 24 connection functions.

Terminal	Function	Terminal	Function
13	Zone 1 voltage sensing	19	Zone 5 voltage sensing
14	Ground for Zones 1 and 2	20	Ground for Zones 5 and 6
15	Zone 2 voltage sensing	21	Zone 6 voltage sensing
16	Zone 3 voltage sensing	22	Zone 7 voltage sensing
17	Ground for Zones 3 and 4	23	Ground for Zones 7 and 8
18	Zone 4 voltage sensing	24	Zone 8 voltage sensing

The voltage sensing terminal measures the voltage across a 1k Ohm End-of-Line resistor to ground. Use DMP Model 311 1k Ohm resistors. Dry contact sensing devices can be used in series (normally-closed) or in parallel (normally-open) with any of the burglary protection zones.

### 10.2 Operational Parameters

Each burglary protection zone detects four conditions: tamper, open, normal, and short.

The parameters for each are listed below:

<u>Condition</u>	Resistance on zone	Voltage on zone terminal
Tamper	over 2.43 k Ohms	> 2.9 VDC
Open	1.43 k Ohms to 2.43k Ohms	2 to 2.9 VDC
Normal	.215 k Ohms to 1.43 k Ohms	1.2 to 2.0 VDC
Short	under 215 Ohms	under 1.2 VDC

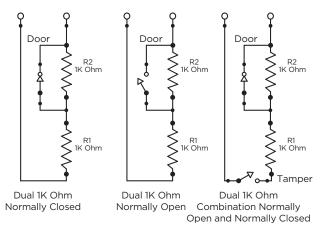

Figure 7: Protection Zone Contact Wiring

### **10.3** Zone Response Time

A condition must be present on a zone for 400 milliseconds before it is detected by the XR150INT/XR550INT Series panel. Ensure detection devices used on the protection zones are rated for use with this delay. Zones 1-10 can also be programmed for a fast response delay of 160 milliseconds.

### 10.4 Keyswitch Arming Zone

Using a keyswitch on an Arming type zone allows you to arm and disarm selected areas without having to enter a user code.

### **Powered Zones for 2-Wire Smoke Detectors**

### 11.1 Terminals 25-26 and 27-28

Panel terminals 25 through 28 provide two resettable Class B, Style A, 2-wire powered zones. For programming purposes the zone numbers are 9 and 10.

Note: The maximum wire length for either zone 9 or zone 10 is 3000 feet using 18 AWG or 1000 feet using 22 AWG. The maximum voltage is 13.8 VDC and the maximum normal standby current is 1.25 mA DC. The maximum line impedance is 100 Ohms. The maximum short circuit current is 56mA.

When using zone expansion modules, use Model 309 EOL resistors. The compatibility identifier for the zones is A.

Note: Do not mix detectors from different manufacturers on the same zone.

Caution: Performing a Sensor Reset momentarily drops power to the devices on Zones 9 and 10. The panel views these zones (9 and 10) as "Open" while the power is absent.

# **Dry Contact Relay Outputs**

### 12.1 Description

The XR150INT/XR550INT Series panel provides two programmable auxiliary SPDT relays when equipped with two DMP Model 305 relays in sockets OUTPUT 1 and OUTPUT 2 and a Model 431 Output Harness on the OUT1-OUT2 6-pin Header. Each relay provides one SPDT set of contacts that can be operated by any of the functions listed below:

- 1) Activation by zone condition: Steady, Pulsing, Momentary, and Follow
- 2) Activation by 24-hour 7-day schedule: One on and one off time a day for each relay
- 3) Manual activation from the DMP LCD keypad menu

4) Communication failure 12) Ready 5) Armed area annunciation 13) Armed 14) Disarmed 6) Fire Alarm, Fire Trouble or Supervisory 7) Ambush Alarm 15) Burglary 8) Exit and Entry timers 16) Phone Trouble 9) System Ready 17) Device Fail 10) Late to Close 18) Sensor Reset 11) Panic Alarm 19) Closing Wait

Refer to the XR150INT/XR550INT Series Programming Guide (LT-1232INT) for specific information.

### 12.2 Contact Rating

The Model 305 relay contacts are rated for 1 Amp at 30VDC (allows .35 power factor). Connect auxiliary power to the Relay Output 1 common terminal by installing the gray harness wire to terminal 7. Current draw for all connected devices must not exceed the panel maximum current rating.

### 12.3 Model 431 Output Harness Wiring

The relay contacts are accessible by installing the DMP 431 Output Harness on the 6-pin header labeled OUT1-OUT2. OUTPUT 2 uses the top three prongs, and OUTPUT 1 uses the bottom three prongs. The wire harness and contact locations are shown below:

<u>Contact</u>	<u>Color</u>			
Output 1 normally closed	Violet			
Output 1 common	Gray			
Output 1 normally open	Orange			
Output 2 normally closed	Violet with w			

Output 2 normally closed

Output 2 common

Output 2 normally open

Violet with white stripe

White with gray stripe

Orange with white stripe

The relay contacts must be connected to devices located within the same room as the XR150INT/XR550INT Series panel.

# **Annunciator Outputs**

### **13.1 Description**

The four programmable annunciator outputs can be programmed to indicate the activity of the panel zones or conditions occurring on the system. Annunciator outputs do not provide a voltage but instead switch-to-ground a voltage from another source. The outputs can respond to any of the conditions listed in the Description section for Dry Contact Relays. Maximum voltage is 30VDC @ 50mA.

### 13.2 Model 300 Harness Wiring

Access the open collector outputs by installing DMP 300 Harness on the OUTPUTS 4-pin header. The output locations are shown below. For listed applications, devices connected to the outputs must be located within the same room as the panel.

Output	Color	Wire	Output	Color	Wire
3	Red	1	5	Green	3
4	Yellow	2	6	Black	4

# 13.3 Model 860INT Relay Module

Connect a Model 860INT Relay Module to the OUTPUTS header on the XR150INT/XR550INT Series panel to provide relays for outputs 3-6.

Use these relays for electrical isolation between the alarm panel and other systems or for switching voltage to control various functions. Power is supplied to the relay coils from a single wire connected to the panel auxiliary power terminal 7. The module includes one relay and provides three additional sockets for expansion of up to four relays. Mount the module inside the panel enclosure using the 3-hole pattern and plastic standoffs. Refer to the 860INT Module Install Sheet (LT-0484INT) as needed.

Relay Contact Rating: 1 Amp at 30 VDC (allows .35 power factor)

# **Wireless Bus Expansion**

### **14.1 Description**

The Wireless Bus (XBUS) header provides connection for the 1100XINT Wireless Receiver. The XBUS provides up to 500 wireless zones numbered 500-999. Refer to the 1100XINT Wireless Receiver Install Guide (LT-1822INT) for complete information.

- XR550INT provides up to 500 zones
- XR150INT provides up to 100 zones

### 14.2 Wireless Bus LEDs

The two LEDs, located above the XBus header, indicate data transmission and receipt. The left LED flashes green to indicate the panel is transmitting data. The right LED flashes yellow to indicate the panel is receiving data.

# LX-Bus<sup>™</sup>/AX-Bus<sup>™</sup> Expansion

### 15.1 LX-Bus HeadersLX-Bus/AX-Bus Headers

XR150INT/XR550INT Series panels are capable of providing zone, output, and access control expansion by connecting hardware modules to the AX/LX-Bus headers on the control panel. XR150INT panels are manufactured with one LX-Bus header labeled LX500. AX-Bus operation does not apply to XR150INT panels. XR550INT panels are manufactured with five AX/LX-Bus headers labeled LX500-LX900. Application determines if a header works in AX-Bus or LX-Bus operation.

### LX-Bus (XR150INT/XR550INT)

There are five LX-Bus headers near the bottom of the XR150INT/XR550INT panel:

- LX500 provides zones 500-599 (all panels).
- LX600 provides zones 600-699 (XR550INT only).
- LX700 provides zones 700-799 (XR550INT only).
- LX800 provides zones 800-899 (XR550INT only).
- LX900 provides zones 900-999 (XR550INT only).

## AX-Bus (XR550INT V111 or higher):

AX-Bus operation is compatible only with XR550INT control

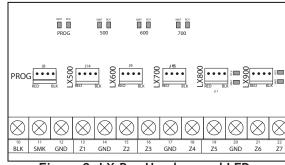

Figure 8: LX-Bus Headers and LEDs

panels and DMP Model 734INT Wiegand Interface door access modules. The 734INT provides one Form-C relay output and four expansion zones. AX-Bus operation is not compatible with addressable zone and output expanders. Each AX-Bus represents predetermined addresses for 734INT operation: 16 addresses for 734INT door relay outputs, and 64 addresses for 734INT expansion zones.

### AX-Bus Available Addresses and 734INT Zone Numbers

734INT	AX500		AX600		AX700		AX800		AX900	
Address	Door	Zones								
1	501	501-504	601	601-604	701	701-704	801	801-804	901	901-904
2	505	505-508	605	605-608	705	705-708	805	805-808	905	905-908
3	509	509-512	609	609-612	709	709-712	809	809-812	909	909-512
4	513	513-516	613	613-616	713	713-716	813	813-816	913	913-916
5	517	517-520	617	617-620	717	717-720	817	817-820	917	917-920
6	521	521-524	621	621-624	721	721-724	821	821-824	921	921-924
7	525	525-528	625	625-628	725	725-728	825	825-828	925	925-928
8	529	529-532	629	629-632	729	729-732	829	829-832	929	929-932
9	533	533-536	633	633-636	733	733-736	833	833-836	933	933-936
10	537	537-540	637	637-640	737	737-740	837	837-840	937	937-940
11	541	541-544	641	641-644	741	741-744	841	841-844	941	941-944
12	545	545-548	645	645-648	745	745-748	845	845-848	945	945-948
13	549	549-552	649	649-652	749	749-752	849	849-852	949	949-952
14	553	553-556	653	653-656	753	753-756	853	853-856	953	953-956
15	557	557-560	657	657-660	757	757-760	857	857-860	957	957-960
16	561	561-564	661	661-664	761	761-764	861	861-864	961	961-964

### 15.2 LX-Bus/AX-Bus LEDs

The two LEDs, located above each LX-Bus header, indicate data transmission and receipt. The left LED flashes green to indicate the panel is transmitting LX-Bus data. The right LED flashes yellow to indicate the panel is receiving LX-Bus data.

### 15.3 OVC LEDs

The Overcurrent LED (OVC) lights Red when the devices connected to the Keypad Bus and LX-Bus(es) draw more current than the panel is rated for. The LED(s) turn a steady Red when lit. When the OVC LED(s) light Red, the appropriate LX-Bus(es) and Keypad bus are shut down.

- The OVC LED located to the left of the 893A connector indicates overcurrent for the Keypad Bus (Terminals 7-10 and PROG header), XBUS, and LX500-LX700.
- The OVC LED to the right of the CELL MODULE connector indicates overcurrent for LX800-LX900.

# **ETHERNET Connector (Panels with Network only)**

### 16.1 Description

The ETHERNET Connector is available on the XR150INT/XR550INT Series panel with network to connect directly to an Ethernet network using a standard patch cable. The ETHERNET Connector supports 100MB/s full duplex operation and the maximum impedance is 100 Ohms.

### 16.2 Ethernet LEDs

The two LEDs, located on the top edge of the ETHERNET Connector, indicate network connection. The right, Link LED lights up green to indicate a valid receive connection from the host network. The yellow LED lights when connected to a 100 Mb network and is off when connected to a 10Mb network.

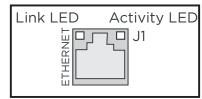

Figure 9: ETHERNET and LEDs

### **16.3 Network Transient Suppression**

The Model 270 Transient Suppression Module provides surge suppression from the Ethernet network for the protection of DMP Panels. Refer to the Model 270 Installation Sheet (LT-1316) for complete information.

### **PHONE LINE RJ Connector**

### 17.1 Description

Connect the panel to the public telephone network by installing a DMP 356 RJ Cable between the panel PHONE LINE connector and the RJ31X or RJ38X phone block. The maximum impedance is 100 Ohms.

### 17.2 Phone Line Monitor

The XR150INT/XR550INT Series panel has a built-in telephone monitor that monitors the phone line voltage to verify the connection to the central office. Figure 10 and the table below identify the phone block pin layout, wire numbers, and colors.

Wire Number	Wire Color
1	Gray
2	Orange
3	Black
4	Red
5	Green
6	Yellow
7	Blue
8	Brown

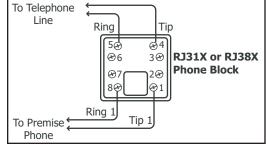

Figure 10: Phone Jack Wiring

The wires on the RJ31 that feed pins 4 and 5 should be the ONLY wires on the D-marc. All other house phone wiring should be tied to pins 1 and 8 coming back from the RJ31.

Dial tone must come into RJ31X on pins 4 and 5 and go back to house phones from pins 1 and 8. Follow these steps to determine if panel is seizing the line:

- 1. Unplug phone cord from RJ31X.
- 2. Place hand-set on pins 4 and 5.
- 3. Listen for dial tone. With dial tone present, lift either wire from pins 1 or 8.
- 4. Listen for dial tone again. If the dial tone is present, RJ31X wiring is correct. If no dial tone is present, the RJ31X wiring is backwards. Rewire so dial tone is coming IN on 4 and 5.

If you still have trouble with the phone line, you may need to replace the RJ cord. If the dial tone is still not present, swap out the RJ31X phone block.

# **RESET and TAMPER Headers**

### 18.1 RESET Header

The RESET header is located to the left of the Expansion Header (EXP) on the right side of the circuit board and is used to reset the XR150INT/XR550INT Series microprocessor. To reset the panel when first installing the system, install the reset jumper before applying power to the panel. After connecting the AC and battery, remove the reset jumper.

To reset the panel while the system is operational, for example, prior to reprogramming, install the reset jumper without powering down the system. Remove the reset jumper after one or two seconds.

After resetting the panel, begin programming within 30 minutes If you wait longer than 30 minutes, you must reset the panel again.

### 18.2 TAMPER Header

The TAMPER header is for use with the optional DMP 306 Tamper Harness. The harness connects to one or more tamper switches mounted inside the panel enclosure to supervise against unauthorized enclosure opening or removal. Refer to the wiring diagram on the enclosure door for correct tamper switch wiring.

### **How the Tamper Works**

If the enclosure is opened or removed while one or more of the system areas are armed, a panel tamper alarm is indicated. If all areas are disarmed, a panel tamper trouble is indicated.

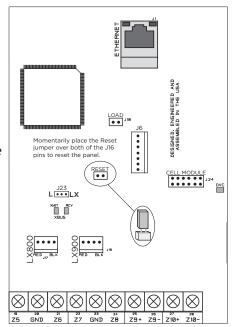

Figure 11: XR550INT Series Panel Showing the RESET Jumper

### Cellular Module

### 19.1 CELL MODULE Header

The CELL MODULE header is located to the right of the Expansion (EXP) Module header on the right side of the circuit board and is used to connect the DMP Model 263LTE-INT-A Cellular Communicators. This provides a fully supervised alarm communication path for the XR150INT/XR550INT Series panel. Refer to the 263LTE-INT-A Installation Sheet for complete information.

### 19.2 Module Installation

- 1. Insert the PCB standoff end with flanges into the standoff hole in the panel PCB.
- 2. Align the PCB standoff with the standoff hole in the module PCB.
- 3. Press the module PCB card 12 pin connector onto the CELL MODULE header on the panel while applying even pressure to both sides of the board to fully seat the module. See Figure 12.

Note: DO NOT MISALIGN THE CELL MODULE 12 PIN CONNECTOR ONTO THE CELL MODULE HEADER. If needed, the PCB can be removed from the enclosure to allow placement of the cell module.

# 19.3 Connecting the Antenna

- 1. Attach a 381-2 cable to the SMA connector on the cell module.
- 2. Position one of the supplied washers onto the other end of the 381-2 SMA connector and push the threaded end through an enclosure knockout.
- 3. Position the second washer onto the threaded end extending through the knockout and secure the nut.
- 4. Attach the included 383 Antenna to the SMA connector. See Figure 12.

**Note:** As an alternative, an antenna coax can be connected directly to the cell module SMA connector when the coax enters the enclosure via conduit.

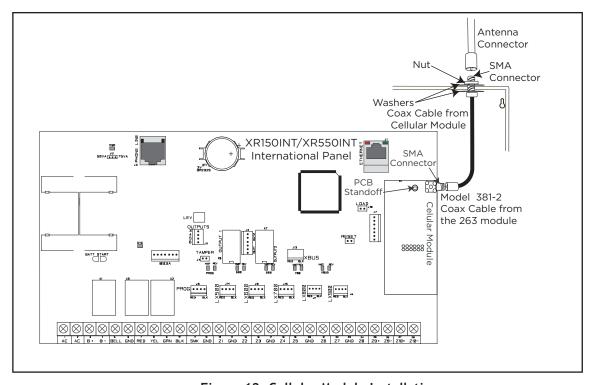

Figure 12: Cellular Module Installation
