

# Communication is Critical

---

CONNECTIONS FOR  
YOUR HOME SECURITY SYSTEM

## FEATURES YOU CAN DEPEND ON

### RED-ILLUMINATED KEYPAD

Most systems automatically reset after an alarm has been tripped. Yours will illuminate red until YOU reset it. If you arrive home and see red, you know there was trouble – and that the intruder could still be inside.

### FALSE ALARM FEATURE

The system prompts users to answer the question on the keypad “Is this a false alarm” NO YES. With the user’s response, the monitoring center receives a simple response as to whether to dispatch or not.

### PANIC

Call help immediately by pressing the panic key on your keypad.

### HOME/SLEEP/AWAY

The Home button arms only the exterior doors and windows while you’re home so you are free to move around inside. The button for Sleep arms all areas except those near bedrooms. Pressing the Away button fully arms your system.

## Constantly Connected

Wherever you are — at home, work, or on the road — you can interact with others via a variety of communication links, and access data from a virtually unlimited number of sources.

By taking advantage of cellular, network, and other communication channels, we are able to provide homeowners with increased security, added convenience, and a constantly growing list of new features.

## Your Silent Sentry

While some homeowners ask about a freestanding security system, you create a vastly increased level of security by having your system monitored via a communication link. When there’s an alarm, your system will alert our monitoring center to dispatch the appropriate emergency responders.

Having your alarm system monitored 24/7 by our operators offers peace of mind. Your system will alert our monitoring center of any system triggered alarms whether medical, duress, panic, fire or burglary. In the event of an emergency, responders will be notified.

## Communication Options

When selecting your home security system, one of the most important considerations is availability of a communication link, and the flexibility to select a different link in the future if necessary.

You have three options for connecting your system to our monitoring center.

**DIAL-UP** phone lines were once the only way to connect to the monitoring center. However, dial-up is probably the least secure communication link because phone lines may be downed by weather or cut by intruders.

**NETWORK** (Internet) connections provide much higher communication speeds than dial-up, and also enable a range of new features. With a network connection, you can remotely access your system and receive alerts/alarms via e-mail.

**CELLULAR** is becoming the most reliable and capable connection. Your cellular connection can't be accidentally or intentionally cut, and cellular opens the door to an incredible assortment of mobile security features.

## Total Mobile Control

If you include a cellular connection for your security system, you have a number of options for mobile control.

The **Virtual Keypad™ app** works on your smartphone or mobile device. Download the app, and you can access all of the most commonly used security system functions and video via an attractive graphic interface.

## Control Your Home

Using cellular communication with your security system makes it possible to add a variety of home control features via your smartphone or mobile device.

- ☑ Remotely turn on lights, radios, televisions and other appliances, creating the impression that someone is home.
- ☑ Adjust your thermostat, so you can set the temperature while you're away, then adjust it to a comfortable temperature on the way home... a real energy and money saver.
- ☑ Unlock exterior doors, so you can let someone in, even when you're not home. You can also remotely lock exterior doors, eliminating the need to rush home to verify that you locked the door on your way out.
- ☑ Open or close your garage door and check door status.

*With a cellular connection you can control your security system remotely, as well as control other devices such as locks, lights, thermostats, and MORE!*

## Protecting Your Most Valuable Asset, Your Family

Protecting your family is serious business, which is why we take our business equally as serious. When selecting your security system, carefully consider the communication options and features. While most systems provide basic home protection, the right communication capabilities greatly enhance the security performance of your system.

Adding a cellular communication link not only strengthens your security system but also keeps you connected to what matters most — your family.

Use the Virtual Keypad app to remotely access interior and exterior wireless IP video cameras or video history including recorded video from your Network Video Recorder hard drive. View the images live, record video clips, or have clips e-mailed to you.

Keypad lighting illuminates red during an alarm, and remains red, so you can instantly see that an alarm has occurred while you were out.
