

Entré™ Security & Access Management Software

August 2011

Version 7.9 Software Update

Effective August 22, 2011, all Entré Security & Access Management software is being shipped as Version 7.9 (8/11/11).

Features

New Panel Wizard

Entré now includes an "Add New Panel" wizard when creating a new panel. The wizard assists customers in the creation of a new panel and provides validation. In addition, the wizard populates the panel firmware information in the Panel Firmware version field on the Communication tab.

Additional DVR Support

Entré now supports and provides a wizard to help the user connect and retrieve configuration information from a 3VR DVR. In addition, Entré now supports the Verint Edge DVR, the Dedicated Micros DVR, and the March Networks DVR.

Updated Operation

Limit Access to SQL Reports

Entré now allows administrators new options to assign all reports, allow a user read only access to SQL reports, or allow/disallow access to each of the three types of reports within the module independently.

Previously, any user with access to the reports module could access reports, as well as the SQL based report module.

Schedule Automatically Sent

Entré now automatically updates time schedules to the panel. After the initial schedules are manually downloaded, any subsequent changes are now automatically sent to the panel.

Previously, the changes were not being automatically sent and had to be manually sent to the panel in order for the changes to appear.

Central Station

Entré Central Station can now send devices, areas, zones, and outputs to the panel.

Assign Doors to Output Groups

Users can now assign doors to an output group.

Previously, when adding outputs to an output group, a door was not in the list of selectable outputs.

Upgrading/Ordering New Firmware

Entré Security & Access Management Software update may be obtained by calling DMP Customer Service at 1-800-641-4282 and ordering ENTRE/UPDATE.
