

Remote Link and System Link

July 2013

Version 1.67 Software Update

Effective July 2, 2013, all Remote Link and System Link software is being manufactured as Version 1.67 (6/19/13). If your current Remote Link or System Link software is previous to Version 1.46, update to Version 1.59 before updating to 1.67 (6/19/13).

Important Information: To provide better scalability for growth, SecureCom Wireless has upgraded servers used to provide dealers remote programming of panels over a cellular connection. The SecureCom Wireless server upgrades were completed in November 2012. Older versions of Remote Link prior to version **1.59 (6/24/11)** no longer have the ability to remote program through a panel's cellular connection. If using an older Remote Link version and your company remote programs through a panel's cellular connection, a Remote Link update is required. There is no requirement to update for remote programming if using Remote Link Version 1.59 (6/24/11) or higher.

Feature

Account Groups XR550 Support

The Account Groups module now supports the new XR150/XR350/XR550 Series Control Panels. All features of the Account Groups module are available; however, XR100/XR500 Series Control panels and XR150/XR350/XR550 Series Control Panels cannot be combined in the same account group. For example, if an account group contains an XR100 panel, an XR150/XR350/XR550 panel cannot be added to that account group.

Obtaining the New Software

Remote Link and System Link Version 1.67 (6/19/13) updates are available for download free of charge on the DMP Dealer Direct Website at <http://dmp.com/dealer>.
