

## Entré Security & Access Management Software

September 2013

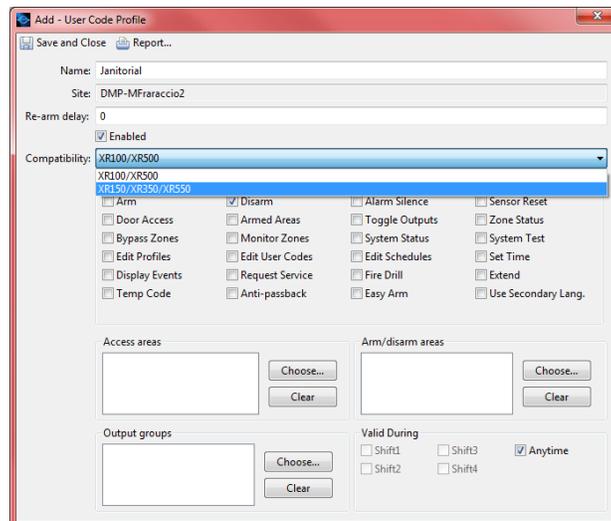

### Version 7.9.3 D2 Software Update

Effective September 26, 2013, all Entré Security & Access Management software is being manufactured and shipped as Version 7.9.3 D2 (9/23/13).

### New Features

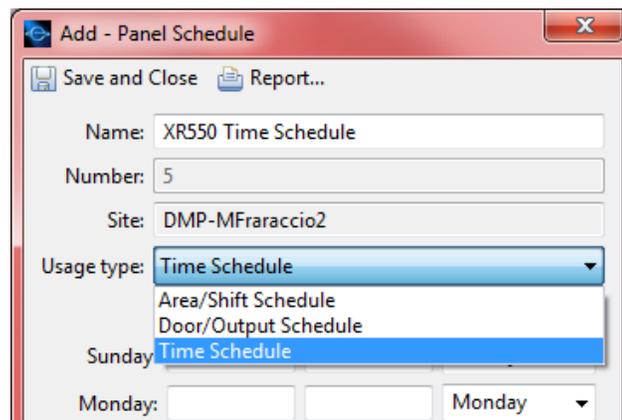

#### User Profile Compatibility

A Compatibility dropdown menu has been added to the Add User Code Profile window to allow the creation of User Code profiles that are compatible with XR100/XR500 or XR150/XR350/XR550 Series Control Panels. The dropdown menu defaults to XR150/XR350/XR550 compatibility. Once panel compatibility has been chosen it cannot be changed for that profile.

#### XR550 Schedules

Entre now supports XR150/XR350/XR550 schedules. Eight schedules may be assigned for each area, door and output. When creating a schedule choose Time Schedule from the Usage type drop down. Once the Usage type has been chosen it cannot be changed for that schedule.

#### 10 Digit User Code Support

Entre Version 7.9.3 D2 now supports User Codes up to 10 digits in length. To enable, open System Configuration > DMP Communication Configuration and enter 10 in the User Code Length field.

#### 734N Support

Entre Version 7.9.3 D2 supports Device Status (such as Locked or Unlocked) of the 734N and 734N-WiFi Wiegand Interface Modules.

#### XR500 Version 212 Support

Entre now supports XR100/XR500 Series panels using up to Version 212 software.

## Updated Operation

### Downloading Changes

Previously, while downloading a large set of changes to a panel, the panel's state in the hardware tree may have prematurely changed from "Downloading" to "Online" before changes were completely downloaded to the panel. Version 7.9.3 properly displays "Downloading" until all changes are sent to the panel.

### Log File Errors

When Entre received configuration information from a panel, Entre may have validated the information according to a different panel type causing an internal error. When excessive amounts of these errors were written to the log file the speed performance of Entre was affected. Entre Version 7.9.3 D2 properly validates information received from panels.

### Reports

Reports generated from the Reports module did not include events that occurred on the end date defined in the report.

### Schedule Reports

Schedule Reports generated from the Panel Schedules module may not have contained start and end times for individual schedules.

### Duplicate Accounts

Previous versions of Entre incorrectly allowed a panel to be added with the same account number as a disabled panel already in the database. Version 7.9.3 D2 does not allow duplicate panel account numbers even if the duplicate account has been disabled.

### Check-In Time

If the panel attempted to check-in with the Entre server while Entre was sending User Codes to the panel, Entre would not process the check-in and the panel would display as offline until the next check-in.

## Upgrading/Ordering New Software

Entré Security & Access Management Software Version 7.9.3 D2 (9/23/13) update may be obtained by calling DMP Customer Service at 1-800-641-4282 and ordering ENTRE/UPDATE.
