

## Entré Security & Access Management Software

February 2014

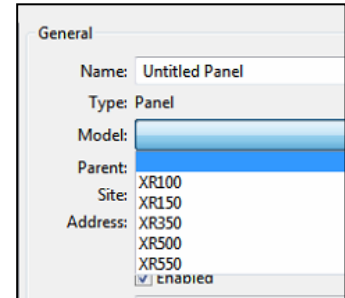

### Version 7.9.3 D3 Software Update

Effective February 27, 2014, all Entré Security & Access Management software is being manufactured and shipped as Version 7.9.3 D3 (2/21/14).

### Features

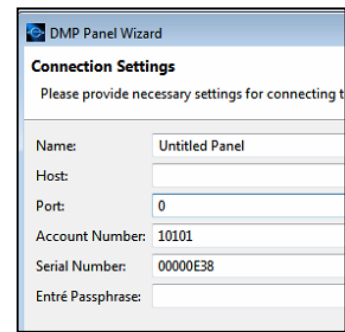

#### Panel Model

When a new panel is added, the operator can now manually select the panel's model number from a dropdown box in the General tab. This allows the operator to program Schedules and Profiles before connecting to the panel. Previously, Entre needed to connect to the new panel before schedules and profiles could be created.

#### XR550 Series DHCP Support

Entre Version 7.9.3 D3 (2/21/14) now supports XR150/XR350/XR550 Series Panels operating with Version 104 or higher software that are using a DHCP connection to the network. Once programmed, the panel automatically establishes a connection with Entre. To enable this feature, set the port to 0 and leave the Host IP Address blank in the DMP Panel Wizard. In the panel Programming menu Remote Options, program an Incoming IP port of 0.

### Updated Operation

#### XR550 Series Communication Programming

Previously, when connected to an XR150/XR350/XR550 Series Control Panel, Entre was unable to retrieve Communication programming from the panel.

#### Schedules

Previously, Entre was only able to download a schedule to an XR150/XR350/XR550 Series Panel if the schedule was one of the first 99 created in the database. Entre now downloads the appropriate schedules to each panel.

#### Admin Reader

When Entre was installed on a 64-bit system and an admin reader was used to create a badge, an error would occur when the Read button was pressed. The card was not read. Entre now supports Admin readers on 64-bit systems.

### Upgrading/Ordering New Software

Entré Security & Access Management Software Version 7.9.3 D3 (2/21/14) will be automatically provided to dealers who have previously purchased an Entre license and are current with their Entre support agreement.
