

Virtual Link July 2015

Version 1.3.0 Update

Effective July 1, 2015, the vk.securecomwireless.com Dealer Website has been updated to Version 1.3.0

Features

Arming App

Dealers can now enable the Virtual Keypad Arming App feature for new customers. The Arming App provides the customer limited access to arm/disarm, view event history, and push notifications. The customer may then choose to upgrade to the full Virtual Keypad App & Website Access. To enable the Arming App, check the box when creating a new customer in Virtual Link. To upgrade to the full version of the Virtual Keypad App, edit the system and check the Virtual Keypad App and Website Access option from the dealer site. Once the customer upgrades, the limited access Arming App option is no longer available.
