

Virtual Keypad™ App Android March 2016

Version 5.1 Software Update

Effective March 4, 2016, the Virtual Keypad™ App for Android systems is now updated to Version 5.1 Software.

Features

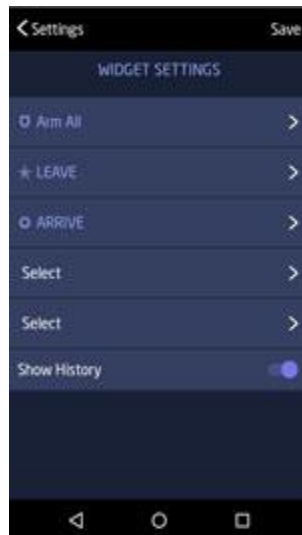

This feature is compatible with Android version 4.2 or higher operating system.

Widgets

There are two Widgets now available to add to the home screen of an Android device using the Widget Settings Screen. The Alarm and Favorite widget allows the user to choose up to five Favorites or Arming options to activate from the home screen without logging into the App. The History Widget displays real time history from your app to the home screen.

Note: User Code must be saved to use arming and favorite widget options.

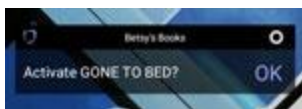

1. Log into the Virtual Keypad App.
2. Tap Settings from the drawer menu.
3. Tap on Widget Settings.
4. Tap on Select. Choose an Arming option, then choose a Favorite. Activate and Delete options display.
5. Arm All will display for an Area system. Arm Perimeter or Arm All will display for All/Perimeter systems. Arm Home, Arm Away, and Arm Bedrooms will display for Home/Sleep/Away systems. Choose A Favorite to Activate lists the favorites already created on your system.

Alarm and Favorite options

History

Now your home screen will display the two widgets with the chosen Favorites and/or Arming options and panel history.

Obtaining the New Software

Virtual Keypad App updates are available for download free of charge from the Google Play Store.
