## Version 6.16 Update

Effective November 29th, 2018, the Virtual Keypad™ App is updated to Version 6.16 for iOS devices. Version 6.16 for Android devices will be coming soon. The following features are available.

## Features

### Enhanced App Features

With Virtual Keypad iOS 6.16, the app will open without going through the previous **Enter Code** screen if you have your User Code saved in the **Settings** tab of the app or if **Save User Code** was selected on the **Enter Code** screen. This allows a smoother and quicker operating experience.

Virtual Keypad 6.16 will save your place if you need to check an e-mail, take a call or use another feature on your phone. As long as you background the Virtual Keypad App and don't close it, you'll return to the same tab you were on when you re-open the app.
