

## FEATURE UPDATE

### Version 2.0.0.1 Update

Effective March 13th, 2020, all 1122 Wireless PIR Motion Detectors are being shipped with Version 2.0.0.1 firmware.

### Wireless Improvements

#### Improved Backwards Compatibility

Version 2.0.0.1 firmware enables the 1122 Wireless PIR to work with DMP transmitters and receivers with firmware Version 106 and older.

#### Improved Survey LED Response Time

The 1122 Wireless PIR Survey LED now has a quicker and clearer response when pressing the tamper button, giving installers improved indication that the 1122 is being installed within acceptable range of the wireless receiver.

#### Improved Battery Performance

1122 battery life has been improved for the small number of instances where firmware versions previous to 2.0.0.1 experienced poor battery performance.
