TECHNICAL UPDATE

Version 201 (4/24/20) Update

Effective April 30th, 2020, all XTLplus and XTLtouch Series panels are being manufactured with updated Version 201 (4/24/20) Firmware.

Improvements

1144 Key Fob LED Feedback Improvement

Previously, there was an issue in XTLplus and XTLtouch panels where 1144 Key Fobs would not give consistent LED feedback when used to arm/disarm the panel. Updated Version 201 (4/24/20) resolves this issue.

1135 Siren Delay Improvement

Updated Version 201 (4/24/20) resolves an issue where the 1135 Wireless Siren delays sounding by up to 45 seconds and also delays reverting back to a normal state after an alarm is canceled by up to 45 seconds. With updated Version 201 (4/24/20), this issue no longer occurs and the siren responds normally.

Obtaining the New Firmware

XTL Series firmware updates are available, free of charge, on Dealer Admin (dealer.securecomwireless.com) or DMP.com/Dealer_Direct.
