Version 2.02 Update

Effective August 10th, 2020, all Remote Link™ software will be manufactured with Version 2.02 (8/10/20). The following features are available:
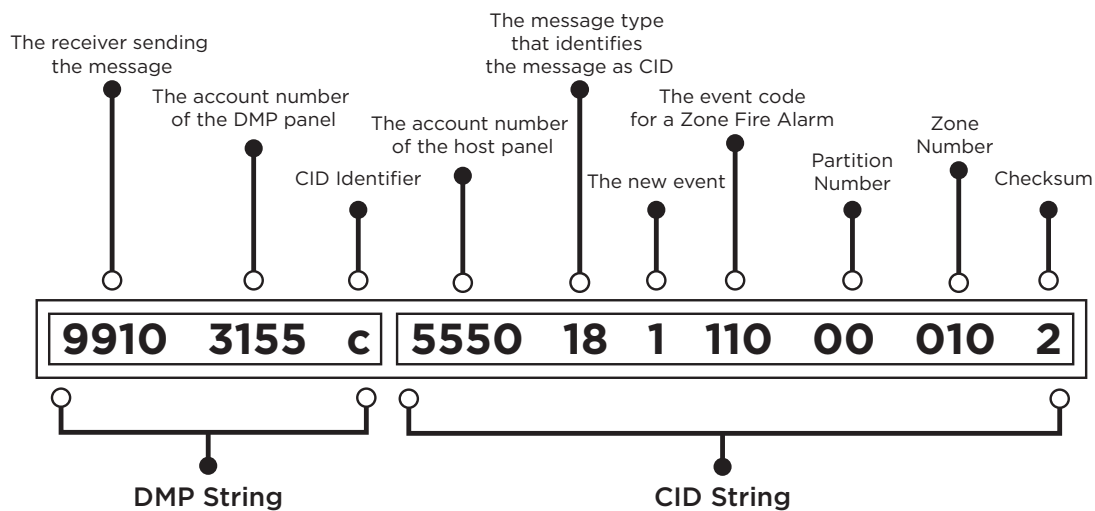

COM Version 202 Support

Remote Link now supports the following features from COM Version 202:

DSC Passthru
DualCom, CellCom, and iComSL communicators can now integrate with DSC PowerSeries panels using the DSC bus. In **System Options > Keypad Input**, available options now include **DSC**. For more information about setup and remote programming, refer to the COM Series How-To Guide: DSC Passthru (LT-2208).

CID Message Format Selection
Remote Link now allows you to choose DMP format or raw CID format for messages sent to the central station. To select the message format, select a communicator, go to **Program > System Options > Options**, then select **DMP** or **CID**. In addition to COM firmware Version 202, this feature requires SCS-VR Version 1.4.6 and higher or SCS-150 Version 107 and higher.

Panel Version 202 Support

Remote Link now supports the following features from XR Version 202, XT Version 202, and COM Version 202:

New Communication Type: Network (XT)
The new **Network** communication type has been added to **Device Setup** for XT Series panels.

7463 Network Keypad Support (XT)
Remote Link now supports installing and programming 7463 Network Thinline Keypads with XT Series panels.
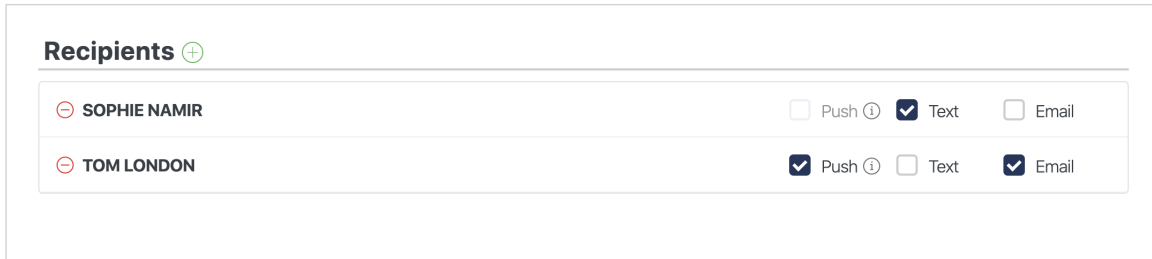

Card Plus Pin By Area (XR)
In addition to using Card Plus Pin with profiles, Remote Link now supports using Card Plus Pin by area. To enable this feature, select a panel, go to **Program > Area Information**, and turn on **Card Plus Pin** for the appropriate areas.

Private Doors (XR)

For private or high-security areas, Remote Link now allows you to assign a door to a specific profile instead of an access area. You can designate private doors in **Device Setup**, assign them to profiles in the **Profiles** menu, then assign that profile to a user in **User Codes**. Profiles may be assigned up to 4 private doors. A user may be assigned up to 4 profiles.

Messaging Setup Removal

In Remote Link Version 2.02, **Messaging Setup** is no longer available in the **Program** menu for all panels with firmware Version 202 and higher. If you have customers that still want to receive SMS messages for panel events, refer them to VirtualKeypad.com. To manage notifications in Virtual Keypad, go to the **Notifications** tab. In **Recipients**, select any of the applicable notification types: **Push**, **Text**, or **Email**. For more information, refer to the VirtualKeypad.com Help article "Custom Notifications".
