New Features

Effective March 18th, 2021, Dealer Admin was updated to Version 2.60.0.

Use Templates for Pre-Programming

You can now use programming templates to pre-program a system in addition to selecting a specific firmware version. Before using pre-programming, create a programming template in **Settings > Programming Templates**. For more information, refer to the Dealer Admin Help article Create a Programming Template.

General Improvements

Dealer Admin only restores user codes when sending auto-programming to the panel for the first time.

Requirements

Creating, pre-programming, and auto-programming a system require the following permissions, depending on the type of role assigned:

- Users with **Preset Roles** require the **Administrator**, **Operator**, or **Technician** role
- Users with **Custom Roles** require that **Permissions > System** is set to **View, add, and edit** and that **System Programming** has **Full/Fast Programming** enabled. To run Auto-Programming Errors reports, users must have **Reports & Analytics** set to allow access.

More Information
