Version 212 Update

Version 212 (5/3/21) firmware is now available on Dealer Admin (dealer.securecomwireless.com).

Effective June 7th, 2021, all XR Series Panels are being manufactured with Version 212 firmware.

Panel Features

Improved Wireless Test Operation

With XR Version 212, the Wireless Walk Test has been renamed the Wireless Test. This test has been improved to provide better testing of the transmitters. The test will now run for a total of 5 minutes. During the 5 minutes the transmitters are being tested multiple times. In order for a transmitter to pass it must have checked in 3 or more times. A timer will be displayed at the keypad to indicate that the test is in progress. At the end of the 5 minutes the results will display which transmitters have failed the test.

Panel Enhancements

Competitor Wireless Update

With XR Version 212, competitor wireless zones will show up when performing the standard Walk Test, but will not show up on the keypad display when performing a Wireless Test.

1100T Supervision Value Improvement

XR Series panels now send the correct supervision value to the receiver when 24 hours is the selected supervision time.

1100T Remote Deletion Improvement

Previously, when an 1100T was deleted the user would be unable to program a device of the same type at that address. With Version 212 firmware, users are able to remotely delete and add devices back to the same address.

Supporting Software Updates

- Dealer Admin Version 2.64.0
- Remote Link Version 2.12

Obtaining the New Firmware

XR Series firmware updates are available, free of charge, on Dealer Admin.
