

## Version 212 Update

Version 212 (5/25/21) firmware is now available on Dealer Admin ([dealer.securecomwireless.com](https://dealer.securecomwireless.com)) or for download at [www.dmp.com/company/dealer-services/product-software](https://www.dmp.com/company/dealer-services/product-software).

Effective June 14th, 2021, all XT Series Panels are being manufactured with Version 212 firmware.

## Panel Features

### Improved Wireless Check-in Test Operation

With XT Version 212, the Wireless Walk Test has been renamed the Wireless Check-in Test. This test has been improved to provide better testing of the transmitters. The test will now run for a total of 5 minutes. During the 5 minutes the transmitters are being tested multiple times. In order for a transmitter to pass it must have checked in 3 or more times. A timer will be displayed at the keypad to indicate that the test is in progress. At the end of the 5 minutes the results will display which transmitters have failed the test.

## Panel Enhancements

### Arm Activity Days Update

Previously, Arm Activity Day reports were only able to be sent via Net, Wi-Fi, and Dialer communication paths. With XT Version 212, reports are able to be sent via cellular communication as well.

### Remote Initiation Identification

Push notifications now include an identifier that shows that an event has been initiated remotely. For example, if a user arms the panel from the Virtual Keypad™ app, the notification will say that the system has been armed remotely.

## Supporting Software Updates

- Dealer Admin Version 2.64.0
- Remote Link Version 2.12

## Obtaining the New Firmware

XT Series firmware updates are available, free of charge, on Dealer Admin or [www.dmp.com/company/dealer-services/product-software](https://www.dmp.com/company/dealer-services/product-software).
