New Features

Effective June 22nd, 2021, all Remote Link™ software will be manufactured with Version 2.12 (6/3/21).

Panel Version 212 Support

Remote Link 2.12 now supports XR, XT, and Com Series firmware Version 212.

Improvements

1100T Supervision Value Improvement

XR Series panels now send the correct supervision value to the receiver when 24 hours is the selected supervision time.

1100T Remote Deletion Improvement

If an 1100T was deleted in Version 2.11, the user would be unable to program a device of the same type at that address. Version 2.12 enables users to delete and then quickly add devices back to the same address.

Com Series System Reports

The **Send Stored Messages** feature is now available in **System Reports** for compatible Com Series Universal Communicators.

Legacy Remote Link Versions and 1100T Competitor Wireless Zones

Using legacy versions of Remote Link to manage 1100T zones could disorder existing programming in competitor wireless zones. This issue has been fixed in Version 2.12. Although competitor wireless zones can be programmed with legacy versions of Remote Link, official support released in Remote Link Version 2.11, which is still the minimum effective version for programming the 1100T.

User Interface Improvements

In **Device Setup**, display of the device type may have briefly displayed an incorrect device type when loading, particularly for **1100T** devices. This display issue never affected panel programming and is fixed in this version.

In **Zone Information > Wireless / VPlex**, the competitor wireless programming section name has been changed from **DMP Wireless - Unknown Device** to **DMP Wireless - Competitor Wireless**.

In **Select Accounts > Account Access**, interaction with form elements like checkboxes may have been inhibited and incorrect values may have been displayed at times. These issues are fixed with Version 2.12.

More Information

To learn more, refer to the following technical updates:

- XR Series Firmware Version 212 (TU-1238)
- XT Series Firmware Version 212 (TU-1239)
- Com Series Firmware Version 212 (TU-1248)
