

## New Features

Effective December 9th, 2021, Dealer Admin is updated to Version 2.73.0.

### Central Station Integration

Dealer Admin now integrates with central station automation so connection status can be monitored and the system can be put on test remotely. These compatible central stations include:

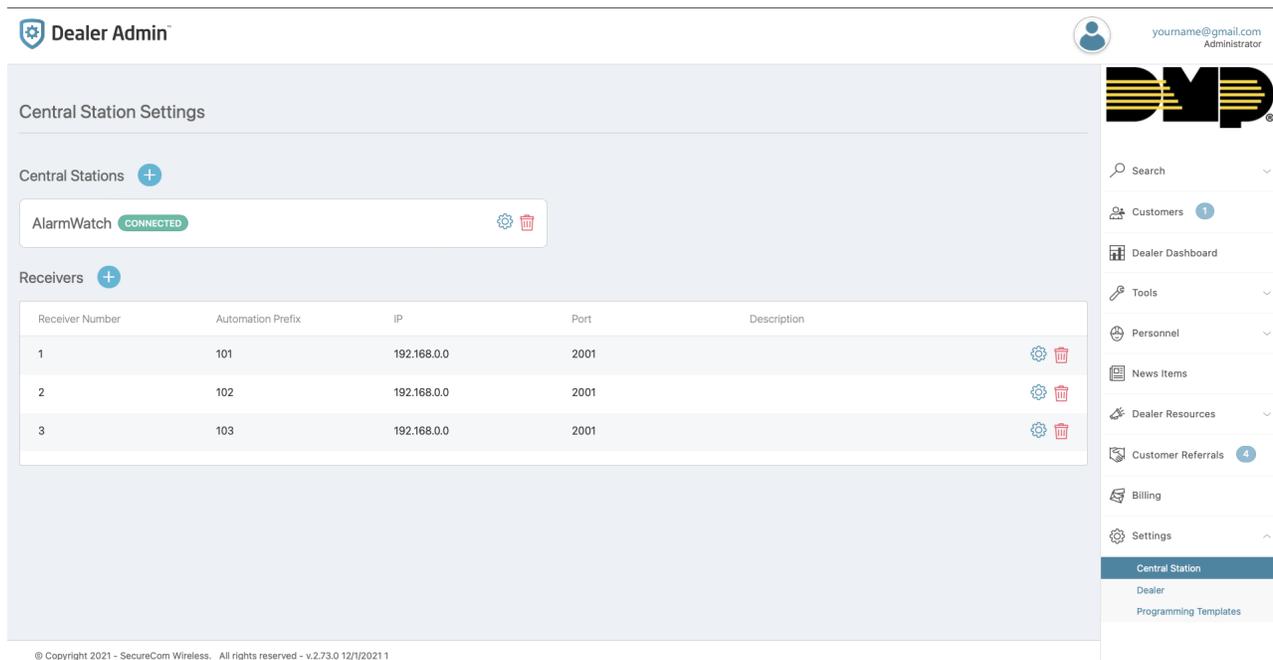

- Rapid Response
- AlarmWatch
- Affiliated Monitoring
- CMS
- Other (for dealers who own and operate their own central station)

#### Add an Integration

 **Requirement:** To manage integrations, you must have either an **Administrator** role or a custom role that allows you to view, add, edit, and delete **Central Stations** (previously called **Receivers**).

To add an integration, complete the following steps.

1. Go to **Settings > Central Station**.
2. In **Central Station**, select  Add.
3. Select a central station. To add a custom integration, select **Other** and follow the onscreen directions.
4. Enter the automation username and password.
5. To allow users in Virtual Keypad to create an emergency contacts list, select **Emergency Contacts**.
6. To allow users to place the system on test remotely from Virtual Keypad or Dealer Admin and Tech APP, select **Place System on Test**.
7. Select **Save**.

## View Central Station Communication Status

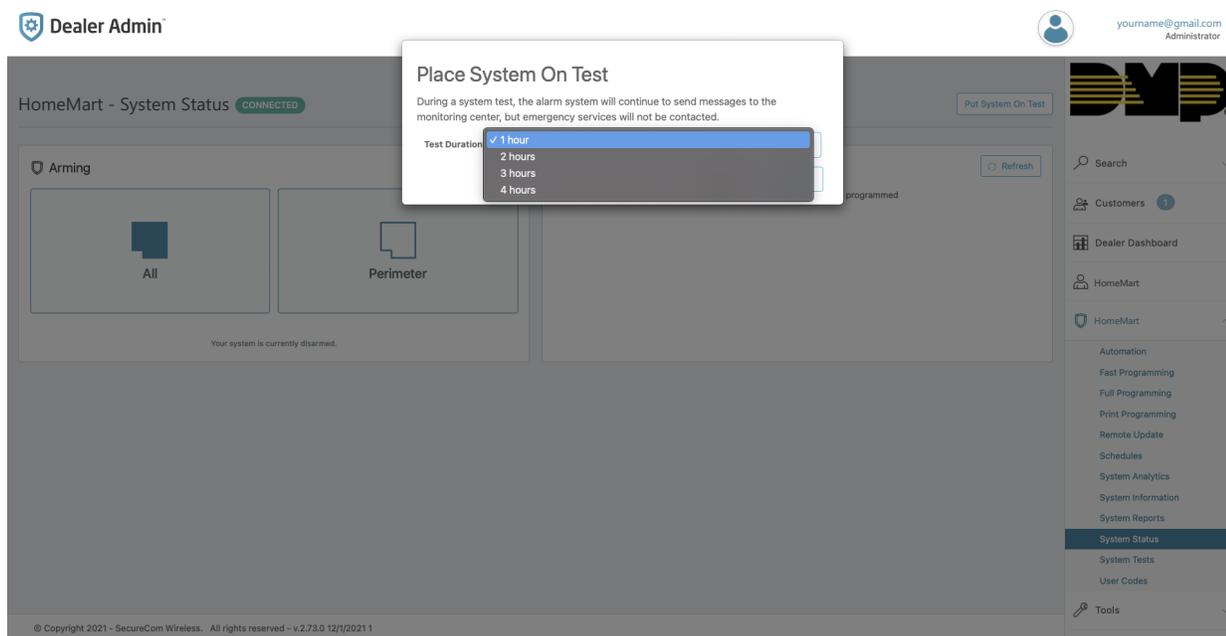

You can view the central station connection status for a single system in **System Status**. You can also view the status for all of a customer's systems at once by opening the **Customer Summary**.

## Place the System on Test

1. To put the system on test, open the system and go to **System Status**.
2. Select **Place System on Test**, then select a duration.

 **WARNING:** For the number of hours that you specify, the system will send signals to the central station but emergency services will not be contacted.

3. To start the test, select **Confirm**.

## Configure Receivers

In the new Central Station page, set up your Receivers using prefixes as needed to ensure each panel is linked properly to automation.

1. In the menu, go to **Settings > Central Stations**.
2. Select  Add.
3. Enter the receiver's **Receiver Number**, **Automation Prefix**, **IP Address**, **Port**, and **Central Station**. If desired, enter a brief description about the receiver in **Description**.
4. Select **Save**.

## User Interface Improvements

- In **Settings**, we changed the name of the **Receivers** page to **Central Station**
- In **Personnel > Custom Roles**, we changed the name of the **Receivers** custom role to **Central Stations**
