

FEATURE UPDATE | MARCH 2022

New Features

Effective March 7, 2022, Virtual Keypad is updated to Version 6.42.0 for iOS and Android and Version 6.39.0 for VirtualKeypad.com.

Multi-Login Management

App users with access to systems managed by more than one dealer can log in to their systems using a single email and password. When the app user logs in to Virtual Keypad, the app user can view all their systems under **Select System**.

To combine current logins, follow the steps below:

1. Go to **Settings > Login Settings**.
2. Select **Combine Login**.
3. Enter the login credentials of another system or systems.
4. Select **Combine**. The newly added system(s) will be listed alongside your original system.

Forgot Password Option

Additional security has been added to user password management. When a user is created, the user will receive an email to set up their own password. If a user later forgets their password, they will select **Forgot Password** which will send them an email that will direct them through the steps to update their password.
