

Version 6.42.3 Update

Effective May 2, 2022, the Virtual Keypad APP for iOS is updated to Version 6.42.3.

Features

Widget to Open Virtual Keypad APP

Virtual Keypad now supports homescreen widgets for opening the app. This feature is only available for iOS versions 14 and higher.

Add a Widget in an iOS Device

Be sure to enable **Save User Code** in Virtual Keypad **Settings** for systems with a Home Screen widget.

1. On the Home Screen, long-press until you can begin editing the Home Screen.
2. In the top left corner, select the plus button and scroll down to Virtual Keypad.
3. Select **Virtual Keypad**.
4. Choose between the available widget sizes.
5. Select **Add Widget**.

6. To select which system you want the widget to display, tap the widget and then **System**.
7. Select the system you want to display.
8. Tap outside of the editor.
9. Select **Done**.

Arm Your System from the Widget in an iOS Device

1. To arm the system, tap the widget and select your arming preference.
2. Close **Virtual Keypad**. The widget displays the system as armed.

Stack Multiple Widgets in an iOS Device

If you have more than one system widget, but want to take up less space, stack the widgets.

1. On the Home Screen, long-press until you can begin editing the Home Screen.
2. Hold and drag each widget to stack them.
3. Select **Done**. Scroll through the widgets to view each system's armed status.

Obtaining the New Software

This Virtual Keypad app update is available for download, free of charge, from the App Store®.
