FEATURE UPDATE | FEBRUARY 2024

Version 731 Update

Updated Version 731 (2/8/24) firmware is now available on XR150INT/XR550INT Series panels.

Panel Improvements

XR INT to XR INT Communication
Allows multiple XR INT Series panels within a single site to operate cohesively. This will allow XR INT systems to communicate with each other over the selected network as well as simultaneously arm and disarm areas on multiple XR INT Series panels. Users can also initiate a fire exit and lockdown across all connected XR INT Series panels. For more information, refer to the Panel to Panel Communication Helpfile.

OSDP Tamper Message Support
If there is an OSDP reader connected to an XR INT system and a tamper occurs at the reader, a tamper message will be sent to the Monitoring Center.

Default Closing Code Update
XR150INT/XR550INT Series panels that are set up as an Area System will now have the Closing Code option defaulted to YES.

Obtaining the New Firmware

XR150INT/XR550INT firmware updates are available, free of charge, on Dealer Admin (dealer.securecomwireless.com) or for download from DMP's Product Software Downloads.
