

FEATURE UPDATE | MAY 2020

Version 8.6.0 (5/6/20) Update

Effective May 7, 2020, all Entré Security & Access Management software will be manufactured as Version 8.6.0 (5/6/20).

Entre 8.6.0 works with panel firmware Versions 183 to 193.

Features for All Entré Customers

Display and Search the Panel Account Number in the Hardware Tree

By using the account number, you can organize the hardware tree for easier identification of your panels. Also, you can search for any specific panel faster and easier when you have multiple panels.

Add, Edit, and Delete Zones under Edit - Panel Tab

Adding and editing zones can be done under the panel's configuration window. A simple double-click on the panel will take you to the **Edit - Panel** window.

736V Device and Zone Support

The 736V V-Plex Module allows you to replace Honeywell® VISTA® FB Series panels with DMP XR150/ XR550 Series panels without replacing serial number addressable V-Plex devices.

Search by Desired User Code Profile in Personnel and Badges

The search has been enhanced to allow you to find the desired user code profile using some of the panel's known identifying information such as account number, panel number, custom fields, etc. This includes any combination of these values.

Included Firmware

Entré now comes bundled with the highest XR panel firmware that it is able to support.

Customize Operator Profile to Display or Hide Drivers

You can customize your operator's profile to hide or show the drivers. You can find this feature under **Edit - Profile > General > Miscellaneous. Display Driver for Hardware Tree and Hardware List** is the default.

Features for Entré NOC Customers and Central Station

Enhanced Search Throughout Entré

Entré 8.6.0 allows multiple values in your search to narrow down your results. Each search word must be separated by "and" to include both in the search.

Faster Load Times

When opening a new module, Entré 8.6.0 will not preload all of the data, thus allowing for a much faster load. For example, when opening the badge module, you don't have to wait for data to load from potentially thousands of panels and devices. Instead, you are presented with an enhanced search to quickly narrow down the information you are looking for.

Improvements

Remote Link to Entré Migration Tool and Entré to Remote Link Export Tool

The newest tools that were made available in Remote Link 1.94 are compatible with Entré 8.6.0.

Improved Performance

This version of Entré also includes various other improvements, including faster search results.

Obtaining the New Software

Entré Security & Access Management software Version 8.6.0 is provided to dealers who have previously purchased an Entré license, are current with their Entré support agreement, and who have an Entré Certified Technician.

To upgrade to Entré Version 8.6.0 (5/6/20), please complete the [Pre-Upgrade Checklist \(LT-1782\)](#) before contacting the Software Support Team in DMP Technical Support at 888.436.7832.
