

FEATURE UPDATE | JANUARY 2019

Version 202 Update

Version 202 (1/18/19) firmware is now available for download on the DMP Dealer Direct website at DMP.com/Dealer_Direct.

Effective February 1, 2019, all 9800 Series Graphic Touchscreen Keypads will be manufactured with Version 202 (1/18/19). Updated units will begin shipping in mid-March.

Feature

128-bit AES encryption

Version 202 (1/18/19) now supports wireless encryption, allowing the keypad to communicate with the following:

- Wireless devices Version 200 and higher
- Wireless receivers/repeaters Version 300 and higher
- Panels with built-in wireless receivers Version 183 and higher

This feature allows wireless graphic keypads to operate on encrypted systems while remaining fully backward compatible with unencrypted systems. To enable wireless encryption, the control panel must be updated to Version 183.

To enable encryption, perform the following steps:

1. Access the panel Programmer menu and navigate to System Options. At the **1100 ENCRYPTION** prompt, select **ALL** to only add encrypted wireless devices to the system. Select **BOTH** to allow both encrypted and non-encrypted wireless devices to be programmed.
2. The default passphrase appears at the **ENTER PASSPHRASE** prompt. Press **CMD** to keep the default. Press any select key or area to change the passphrase and enter an 8 character hexadecimal string (0-9, A-F).

Obtaining the New Firmware

Firmware updates are available for download, free of charge, on the DMP Dealer Direct website at DMP.com/Dealer_Direct.

If you have any questions or concerns about implementing this firmware update, please contact DMP Technical Support by calling 1.888.436.7832 or emailing techsupport@dmp.com.
