

## 1102 Universal Transmitter

March 2018

### Hardware Update

All 1102 Universal Transmitters are now being manufactured and shipped with Level B hardware.

#### New Tamper Design

1102 Universal Transmitters now feature an updated on-board tamper button design. See Figure 1. The new design allows for additional travel by the tamper core prior to initiation of a tamper signal. This will allow the unit to be installed in more extreme field conditions and provide improved overall performance.
