Entré Security & Access Management Software

February 2018

Version 7.9.9 Update

Effective February 5, 2018, all Entré Security & Access Management software is being manufactured as Version 7.9.9 (2/1/18). If your current Entré software is previous to Version 7.9.5, update to Version 7.9.5 before updating to Version 7.9.9 (2/1/18).

Features

Temporary Schedules

With Version 7.9.9 (2/1/18), Entré allows you to program temporary schedules. To create a temporary schedule, navigate to **Panel Schedules** in the **Configuration** menu and click **Add**. Check the **Temporary Schedule** box and enter a **Begin** and **End Date.** See Figure 1. Enter any other necessary information and click **Save and Close**. A temporary schedule expires at the set end date and is automatically deleted from the panel.

Entré Reports

For XR150/XR550 Series panels with Version 172 or higher, you can now decide which types of reports you would like to have sent to Entré. In the Remote Options section of panel programming, select from the following reports. All Entré reports are enabled by default.

- **Entré Arm/Disarm Reports** - Sends arming, disarming, and Late to Close events. Includes the area number, name and action, the user number and name, and the time and date the event occurred.

- **Entré Zone Reports**- Sends changes in the status of active zones. Includes the zone number, name, type, the action (alarm, trouble, bypass, etc.), user number (if applicable), and area name. During a Walk Test, Verify and Fail messages are sent for each zone.

- **Entré User Command Reports** - Sends user code changes, schedule changes, and door access denied events.
- **Entré Door Reports** - Sends door access activity, door number, user number and name, and time and date the event occurred.
- **Entré Supervisory Reports** - Sends system monitor reports, such as AC and battery, and system event reports. If this feature is enabled, the panel also sends Abort, Exit Error, Ambush, System Recently Armed, Alarm Bell Silenced, Unauthorized Entry, and Late to Close reports.

Inactive User Audit Days *(XR550 only)*

You can now enable Inactive User Code Audit Days on a per-profile basis through Entré. This feature allows you to choose the number of days a user code can remain unused before the panel sends an Inactive User Code message to the receiver and changes the user code to inactive. The range is 0-425 days.

To enable Inactive User Code Audit Days on a specific profile, navigate to the **Management** menu and select **User Code Profile**. Add a profile or select an existing profile to edit. Enter the desired number of days in the **Inactive User Code Audit Days** field and check the **Enabled** box. See Figure 2. Enter any other necessary information and click **Save and Close**.

1136 Wireless Remote Chime

Entré now supports the 1136 Wireless Remote Chime.

Improved DVR Compatibility

With Version 7.9.9 (2/1/18), Entré supports the following DVR drivers:

- **Verint**: NetDVR I (Version 6.47.x or higher), NetDVR II (Version 8.7.x or higher), and EdgeVR (all versions)

- **3VR**: E-Series, P-Series, S-Series, and ServerClass

- **exacqVision**

Previously supported units from Dedicated Macros and March Networks are no longer being supported by their manufacturers.

Updated Functionality

Inactive User Alarm Notification

Now, when a user code reaches the end of its programmed Inactive User Audit Days, an alarm notification is displayed in Entré. See Figure 3. This alarm is designed to inform the operator that the user code is now inactive. At this point, the operator can choose to set the user's badge to inactive in Entré.
