CellComSL Series Alarm Communicators
January 2016

Hardware Update

As of January 26, 2016 all CellComSL Series Universal Alarm Communicators are being manufactured and shipped with updated Level C Hardware.
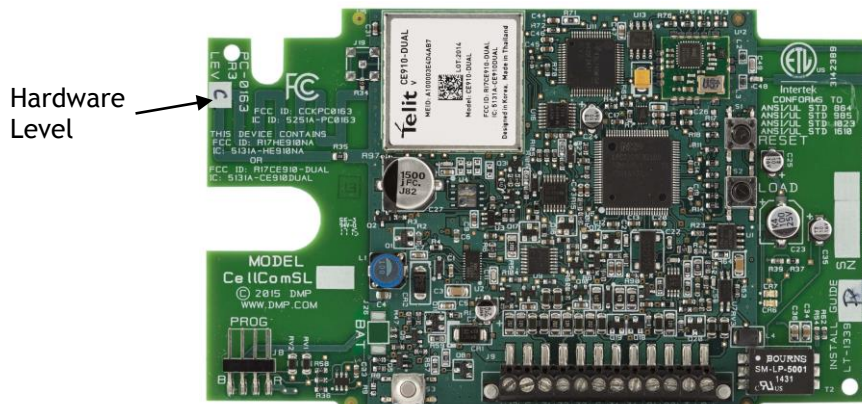

Zone 3 Operation

The following issue only occurred with CellComSLC Series Communicators manufactured with PC-0163 Level B hardware.   This issue does not occur on the previous CellcomSLC Series manufactured on PC-0159. See Technical Update TU-0829 released December 21, 2015.

When using Zone 3 as a zone input connection, the CellComSL with Level B hardware would always report the zone as open. This would occur even though the end of line resistor was in a normal condition.

This issue does not affect CellComSL Communicators that are installed in the following applications:

- CID Dialer Connection
- Zones 1, 2 and 4 Input Connection
- Zone 4 Bell Connection
- Ademco/Honeywell ECP Connection
