

Remote Link and System Link

August 2015

Version 1.76 Software Update

Effective August 19, 2015, all Remote Link and System Link software is being manufactured as Version 1.76 (8/14/15). If your current Remote Link or System Link software is previous to Version 1.46, update to Version 1.59 before updating to 1.76 (8/14/15).

Updated Operation

Large Account Performance

For Remote Link Version 1.75 (7/8/15), when the Remote Link operator connected to a panel with a large number of programmed zones or users and made a programming change, the change was not immediately sent when selecting the Apply button. The programming change was only sent after the panel programming was retrieved. In Version 1.76 (8/14/15), changes are immediately sent to the panel when the Apply button is selected.

Dialer Disconnect

For Remote Link Version 1.75 (7/8/15), when the Remote Link operator attempted to connect to a panel through an SCS-1R or SCS-105 using digital dialer and then tried to abort the connection, "Panel Connection Error" was displayed but the cancellation message was not sent to the receiver to hang up the dialer. The receiver would stay connected to the panel's dialer line until the Remote Link operator chose Panel>Hangup to send the hang up command to the receiver.

Printing Zone Name

When printing the programming for a panel (File>Print>Panel Programming), a zone name over 16 characters in length would be incorrectly cutoff as shown in Figure 1.

ZONE INFORMATION					
Number	Name	Serial Number	Zone Type	Area	Armed Areas
1	VALVE TAMPER CIT		DY	01	
2	TWO		-	01	
3	THREE		-	01	
4	FOUR		-	01	

Figure 1: Panel Programming Report

Inactive User Audit Days

When Inactive User Audit Days is programmed and Panel Log events were requested from the panel, the User Number, User Name and "Inactive" status were not displayed as shown in Figure 2. Only the log entry time and date stamp of the Inactive User Code Audit event was displayed. In Version 1.76 (8/14/15), Panel Log entry time, date stamp, User Number, User Name and "Inactive" status is correctly displayed on the Panel Event Log report as shown in Figure 3.
