FEATURE UPDATE

Virtual Keypad App Android
March 2015

Version 4.3.0 Software Update

Effective March 7, 2015, the Virtual Keypad™ App for Android systems has been updated to Version 4.3.0 Software.

Features

Geofences Alerts

The new Alerts section located on the bottom of the Geofence screen allows the mobile device user to be notified of the following:

Smart Arming Reminder

A Smart Arming Reminder option is provided for each Geofence to push notify a Geofence creator that they have left without arming the system.
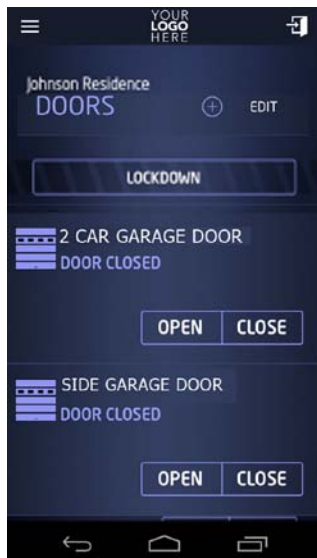

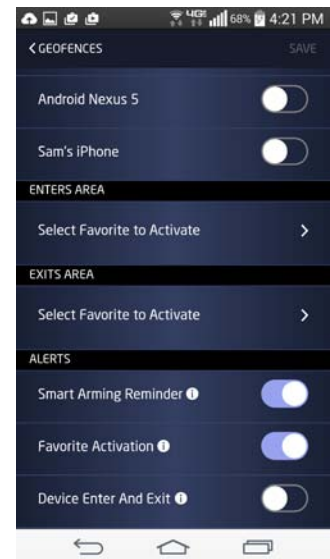

When Smart Arming Reminder is enabled and the creator of the Geofence is the last device to leave, the creator will receive a notification to arm the system if the system is disarmed.

Favorite Activation

When Favorite Activation is enabled, the creator of the Geofence will receive a push notification when a Favorite assigned to the Geofence is activated by any device associated with the Geofence.

Device Enter and Exit

When Device Enter and Exit is enabled, the creator of the Geofence will receive a push notification when any active device enters or exits the geofence.

Z-Wave Garage Doors

The Virtual Keypad App now supports Z-Wave Garage Doors, such as the model Z-GD00Z-4. The Locks Screen has been renamed to Doors and now displays Z-Wave Garage Doors, Z-Wave Locks, and Door Devices.

The following control panel software is required to support the Z-Wave garage door feature:

- XR150/XR350/XR550 Series Version 108 or higher
- XT30/XT50/XTL Series Version 121 or higher

Obtaining the New Software

Virtual Keypad App updates are available for download free of charge from the Google Play Store.
