

## MyVirtualKeypad.com™ Browser

August 2014

### Version 1.4.0 Update

Effective August 1, 2014, the MyVirtualKeypad.com™ Browser has been updated to Version 1.4.0 (8/1/14).

### Features

These features are compatible with the following control panel software.

- XR150/XR350/XR550 Version 106 (7/28/14) or higher
- XT30/XT50/XTL Version 119 (7/30/14) or higher

The Schedules and Door Control features must be enabled by the dealer for each panel at vk.securecomwireless.com.

For additional information on these features, see the Virtual Keypad Browser Help Page.

### Schedules

The Virtual Keypad Browser now allows the user to view, add, edit and delete panel schedules for Arming/Disarming, Favorites, Outputs, and Doors.

The screenshot displays the 'System Schedules' configuration interface. On the left, there is a 'Times' section with a table for setting begin and end times for each day of the week. The 'Areas' section on the right allows users to select which areas (PERIMETER, INTERIOR, BEDROOMS) are included in the schedule, with checkboxes for 'Auto Disarm' and 'Auto Arm'. On the right side of the image, a summary view shows a table of schedules with columns for 'Name' and 'Type', listing items like 'Arming', 'Early Morning', 'Evening', and 'Lights'.

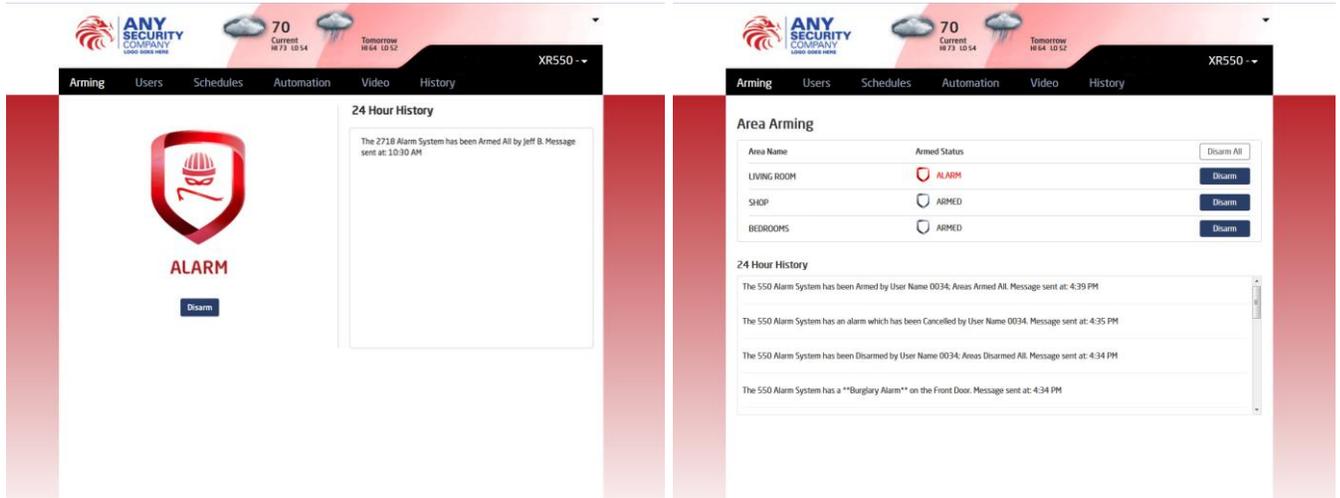

### Door Control and Lockdown

The Virtual Keypad Browser now allows users of XR150/XR350/XR550 control panels to lock and unlock Door type devices from the Automation Tab. A Lockdown button is also provided to lock all public doors in the system.

The screenshot shows the 'Automation' tab in the interface. At the top, there is a 'Lockdown' button with a status indicator 'Sending Lockdown...'. Below this, a list of door types is shown, each with 'Unlock' and 'Lock' buttons and an 'Access' button. The doors listed are 'Access Door', 'Front Door', and 'Back Door'. The interface also includes a sidebar with navigation options like 'Z-Wave', 'Outputs', and 'Actions'.

## Alarm Status

A red shield icon now displays if a burglary alarm is occurring when the user chooses the Arming tab. The background and banner of the website also change to red to indicate the alarm. When the system is disarmed, the graphics return to blue.
