Remote Link and System Link
## May 2007

Version 1.36 Software Update

Effective May 2007, all Remote Link and System Link are being manufactured as version 1.36 (5/16/07) software. This version is an update from the Version 1.35 (3/1/07) previously shipped and contains updated operations.

Updated Operation

Requesting Output Status

After connecting to a panel, Remote Link now does not automatically start requesting the status of system outputs and doors when the Output Status window is opened. When an output or door number is entered in the Start at Output or Start at Door field, Remote Link properly requests all outputs in that range.

In addition, Request All and Clear List options have been added to the Output Status screen to allow more flexibility when requesting output or door status.

Retrieve Events

Remote Link now properly retrieves events when the area name contains a backslash character such as BANK/SAFE.

Previously, Link would display an error message and events could be missing.

Fire Bell Output

When programming a new XR100 or XR100N account, the Fire Bell Output now properly accepts an Output Group number as a valid output.

Obtaining the New Software

Remote Link and System Link updates version 1.36 (5/16/07) are available for download free of charge on the DMP Dealer Direct Website at http://dmp.com/dealer. Hard copy updates on CD can be obtained from buy.dmp.com or by calling DMP Customer Service at 1-800-641-4282.
