

## Remote Link and System Link Software Update

January 27, 2003

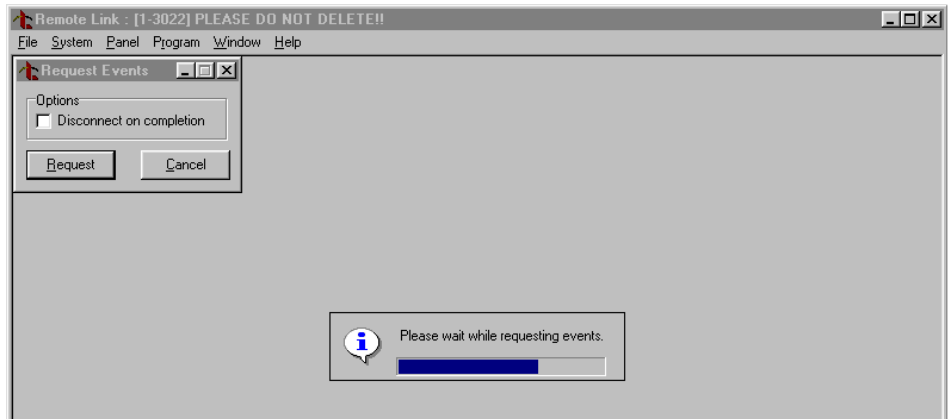

### Version 1.11 Software Update

Effective January 2003, all Remote Link and System Link software are being shipped from the factory as version 1.11 (1/20/03) software. This version is an update from the 1.10 (10/31/02) software previously shipped and contains new features to the program.

### New Features

#### Status Bar

Remote Link now provides a download status bar when Requesting Events. While Remote Link is retrieving the events, a status bar appears on your screen that tracks Remote Link's status while downloading events.

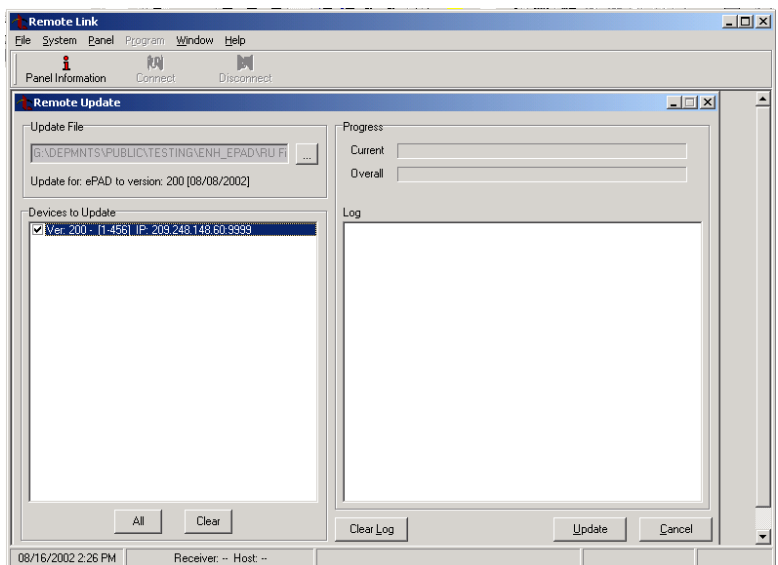

#### iCOM Flash update

Remote Link now supports Remote Update for the iCOM version 102 or higher (to be released January 2003).

The iCOM version 102 has the ability to accept firmware updates from a remote location using Remote Link. Performing a remote firmware update allows you to quickly and conveniently update the firmware without making a trip to the site to manually replace firmware chips.

An Upgrade Port option is provided in the iCOM programming that allows communication between the iCOM and Remote Link.

The firmware updates will be posted to the DMP website at [www.dmp.com](http://www.dmp.com). Follow the directions on the website to download any future iCOM updates to your computers hard drive.

### Ordering the New Software

Remote Link and System Link Updates version 1.11 (1/20/03) are available for download free of charge on the DMP Dealer Direct Website at <http://dmpnet.com/dealer>. If you are a current user of Remote Link, you will automatically be notified of this update. Hard copy updates on CD can be obtained by calling DMP Customer Service at 1-800-641-4282 and ordering the Link Update. The cost for each update is \$30.00.
