TECHNICAL UPDATE

Version 191 (3/14/19) Update

Updated Version 191 (3/14/19) firmware is now available on DMPDealerAdmin.com or for download at DMP.com/Dealer_Direct.

Features

User Code Operation

The following issue was reported on a small number of XR Series control panels after being updated to Version 191 (3/4/19). On these updated units, user codes were set to temporary and inactive, which prevented them from being used normally.

DMP recommends any XR Series control panel that was updated to Version 191 (3/4/19) be updated to Version 191 (3/14/19) using Dealer Admin™ or Remote Link™. After completing the update from Version 191 (3/4/19) to Version 191 (3/14/19) each user code in the system will need to be set to active and have the temporary status removed. This will ensure that all user code programming will perform as intended. Please contact DMP Tech Support at 1-888-436-7832 for any questions.

Remote Link Optimization

XR Version 191 (3/14/19) resolves an issue with Remote Link displaying an error when retrieving favorite schedules. This error did not affect the usability or performance of the favorite schedules.
