TECHNICAL UPDATE

Version 194 (4/30/20) Update

Effective April 30th, 2020, CellCom/iCOM Series Communicators updated Version 194 (4/30/20) firmware is available for download.

Improvements

Communication Enhancement

When updating a CellCom or iCOM Series Communicator that was Version 182 or lower and using Dealer Admin to program the unit, the communicator would send unnecessary information in communication programming. Dealer Admin would display an error when trying to send programming to these communicators. Updated Version 194 (4/30/20) resolves this issue.

After updating the communicator to Version 194 (4/30/20), it is recommended to retrieve the programming from the communicator using Dealer Admin in order for the error to be resolved.

If you have a CellCom or iCom that is Version 183 or higher, this is not an issue.

Obtaining the New Firmware

Com Series firmware updates are available, free of charge, at dealer.securecomwireless.com or DMP.com/Dealer_Direct.
