XT30L Series
February 2012
For release only to DMP dealers in Latin America and DMP Technical Services

Version 109 Software Update

Effective February 13, 2012 all XT30L Series panels are being manufactured and shipped with Version 109 (2/10/12) software. The XT30L is for use only in Latin American countries.

Features

Backup Dialer

The XT30L now allows Digital Dialer backup communication when COMM TYPE is programmed as CELL.

Updated Operation

Z-Wave Programming

When programming the panel to add Z-Wave devices, the panel displayed ZWAVE TABLE FULL and would not allow devices to be added. In order to add a device, the process to remove devices had to be performed. This issue has been corrected.

This issue did not occur when a dealer updated an XT series panel in the field using version 109 (1/14/12) software. This issue only occurred with panels that were returned to DMP for repair and updated to version 109 (1/14/12). There were no panels manufactured with this version.
