Version 2.21 (11/25/22) Datecode

Effective November 30th, 2022, all Remote Link™ software will be manufactured with Version 2.21 (11/25/22).

Improvements

Remote Link 2.21 (11/25/22) contains the following improvements:

Area Disarming Error Message

On occasion, when using Remote Link with a SQL Database, an error message would display when disarming areas. This would only occur when the the system contained the maximum number of areas and attempting to disarm an area that was already in a disarmed state.

Remote Link Version 2.21 (11/25/22) fixes this issue so that when Area Status is retrieved, the Desired Action fields will match the current arming status.

Obtaining the New Software

The most recent version of Remote Link is available for download, free of charge, at dealer.securecomwireless.com.
