Camera Drivers

Benefits

‣ Efficiently integrate DMP technology with Axis cameras

‣ Reduce false alarms by using DMP video verification

‣ Faster, cost-effective installation with no additional hardware needed

‣ Increase RMR

‣ Designed for scalability

‣ These drivers can function separately or be used together for a premium experience

Features

ALARMVISION DRIVER

‣ Uses local area network (LAN) to keep your AlarmVision cameras separate and secure

‣ Leverage cameras' built-in AI features

‣ Works on some of the most popular Axis camera models

VIRTUAL KEYPAD DRIVER

‣ Integrates video into Virtual Keypad to simplify user experience

‣ Compatible with DMP Monitoring Center Video Verification

‣ Video streaming for Axis cameras running Version 11.8 – 11.11

ALARMVISION DRIVER

This camera driver connects Axis cameras with DMP alarm panels, turning cameras into intelligent motion detectors. This places AlarmVision technology at the edge, without additional hardware and uses the on-camera analytics to identify events in real time.

This driver is not dependent on the cloud. It's perfect for communicating locally to the control panel in settings where cloud connection is not approved, such as financial institutions. It doesn't just alert you to events — it lets your alarm system take action on them.

VIRTUAL KEYPAD DRIVER

This camera driver allows an Axis camera to become a fully featured DMP cloud camera. By installing this driver, you provide end users with unified video solutions in Virtual Keypad leveraging the existing cameras at their site.
- Live view in Virtual Keypad
- Playback events
- Push notifications
- Requires cloud communication from site

Integrate video with intrusion and access control features all in one app, Virtual Keypad.
