Version 254 Update

Updated Version 254 (9/19/25) firmware is now available for XF6 Series Control Panels.

Panel Serial Number in Serial 3 Messages

This update allows you to enable Serial 3 messages to include the panel serial number. If enabled, the panel family and corresponding serial number appear at the end of each Serial 3 message, allowing the monitoring center to identify the correct system if two panels unintentionally use the same account numbers.

This update requires one of the following:

- SCS-VR Virtual Receiver
- SCS-1R Network Enabled Receiver with the SCS-150 Main Processor Card at firmware Version 108 (9/23/25).

To enable Serial 3 messages to include the XF6 Series panel serial number, complete the following steps:

1. At the keypad, enter **6653** (PROG) and select **CMD** to enter the programming menu.
2. At **COMMUNICATION**, go to **SYSTEM INFORMATION**.
3. Select **YES** to enable Serial 3 messages to include the panel serial number. The default option is set to **NO**.
4. Go to **STOP** to save programming.

To program Serial 3 messages to include the panel serial number on Dealer Admin, refer to TU-1484.

Obtaining the New Firmware

XF6 Series firmware updates are available, free of charge, on Dealer Admin (dealer.securecomwireless.com) or for download from DMP's Product Firmware Downloads.
