

## TECHNICAL UPDATE

### Version 202 (7/2/20) Date Code Update

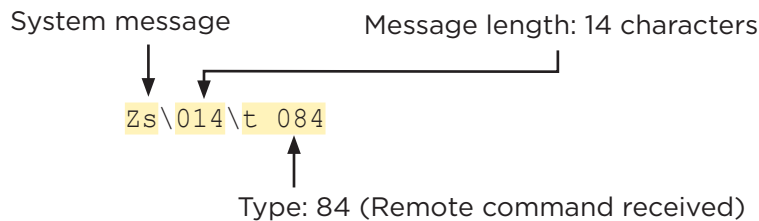

Version 202 (7/2/20) firmware is now available on Dealer Admin ([dealer.securecomwireless.com](https://dealer.securecomwireless.com)) or for download at [DMP.com/Dealer\\_Direct](https://DMP.com/Dealer_Direct).

Effective July 27th, 2020, all XR Series Panels are being manufactured with Version 202 (7/2/20) firmware.

### Updated Functionality

#### S84 Integrator Connection Message Reduction

In previous firmware versions, the panel would send an s84 message to the central station every time a command was received when using the Integrator Connection. XR Series panels with firmware Version 202 (7/2/20) and higher that use the Integrator Connection will no longer send s84 (Remote command received) messages to the central station. For more information about system messages, refer to [SCS-VR Reference Guide: Panel Messages \(LT-1959\)](#).

**Figure 1: s84 System Message Example**

#### Remote Link Panel Messages

When using XR Series panels with firmware Version 202 and any version of Remote Link, some panel events weren't received properly by Remote Link when using the **Request Events** function. This issue is solved in this date code release.
