

Remote Link™

September 2016

Version 1.79 Software Update

Effective September 14, 2016, all Remote Link software is being shipped as Version 1.79 (9/13/16). If your current Remote Link software is previous to Version 1.46, update to Version 1.59 before updating to 1.79 (9/13/16).

Features

410 Cellular Rate Plan

With Version 1.79, the 410 rate plan is available for XT Series panels where cell backup is used and the network primary has Check-Ins enabled.

Account Information Updates

For systems with an active cell device, Remote Link now updates SecureCom when certain account information is changed. If the receiver number, account name, or account number is edited within Remote Link, a window displays signaling that the SecureCom server is also being updated. See Figure 1. This new process helps ensure SecureCom invoices show up-to-date information.

Obtaining the New Software

The Remote Link Version 1.79 (9/13/16) update is available for download free of charge on the DMP Dealer Direct Website at <http://dmp.com/dealer>.

2G Network Shutdown

Do you have all your 2G accounts upgraded already? The end of 2G is near. On December 31st, 2016, all AT&T 2G systems will cease to operate. This will affect your XT and XTL Series panels with built-in GSM cell modules, as well as your 263G and 463G cellular modules.

For all SecureCom Wireless customers, we have customized reports available to you that list your current 2G communicators still in use.

Get your company's custom report by emailing CustomerService@securecomwireless.com or calling us at 877-300-8030. Find out which of your accounts are still on 2G and update them before it's too late.
