

1135 Wireless Siren and 1119 Wireless Door Sounder July 2016

Hardware Update

All Model 1135 Wireless Sirens and 1119 Wireless Door Sounders are now being manufactured using Level M Hardware. The updated hardware will begin shipping as current inventory is depleted which is estimated to occur late August 2016.

1135 Sirens manufactured using Level M hardware will replace the 1135DB as current inventory is depleted which is estimated to occur late July.

Updated Hardware

Level M hardware now includes a 100/110 Decibel Jumper to set the decibel output of the siren. The siren is shipped at the 110 dB output level with the jumper placed on one pin for storage. If the 100 dB setting is required, place the jumper over both header pins. Level M hardware also includes a built in PCB antenna.
