

XT30 Series August 2015

Hardware Update

XT30 Series panels are now being manufactured with updated Level M hardware. The updated hardware will begin shipping as current stock is depleted which is estimated to occur in early September 2015 depending on sales volume of specific models.

Updated Hardware

Remote Update

The XT30 now has expanded memory to support remote firmware update. This new version can be identified by the Level M marking on the left side of the PCB.

XT30 Level M hardware will ship with Version 123 software to complement the operation of the enhanced hardware. Remote Link Version 1.75 (7/8/15) is required to support the remote firmware update. See Remote Link Feature Update TU-0798 for more information.

XT30 PCB hardware prior to Level M cannot be updated to this new level.
