

## XR150 Series Control Panels

### May 2015

### Hardware Update

XR150 Series panels are now being manufactured with updated Level F hardware. The XR150 Series Panel will begin shipping in late June or early July as existing inventories are depleted.

### J6 Expansion Header

A seven position locking header (J6) has been added to the right side of the PCB near the Reset header. This EXP connection will be used to support the future release of the Model 763N-WiFi Communication module. The XR550 Series Panel has always included the J6 EXP header.

PCB hardware prior to Level F cannot be updated to this new level.
