

XR100 Series March 2012

Hardware Update

Beginning March 2012, all XR100 Series panels are being manufactured with updated Level P hardware.

The updated hardware will begin shipping as current stock is depleted and is estimated to occur mid to late April 2012.

Updated Hardware

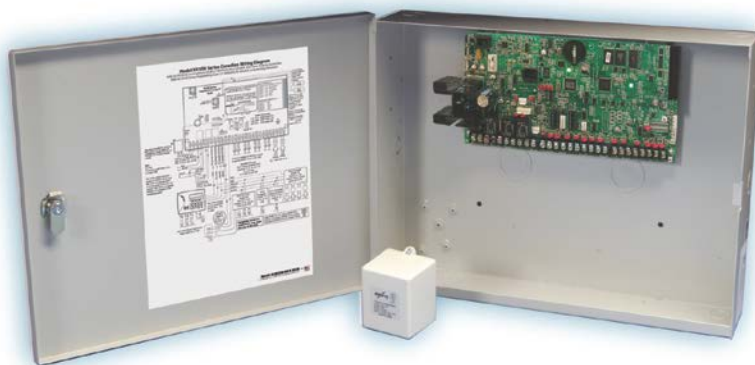

Cellular Communication

The XR100 Series panels with updated Level P hardware now allow the 463G Digital Cellular Communicator to be installed in the Interface Card Connector (J6). In addition, the LX-Bus connection on the 463G can be used for zones 500-599.

The 463G plug-in Digital Cellular Communicator can be used as the primary communication path and/or as a stand-alone communicator without the need for a backup for commercial fire applications when used with the XR100 Series panels.

You can also connect the following devices to the LX-Bus™ provided on the panel or by the DMP 481 and 462N Interface Cards up to the maximum number of LX-Bus™ addresses. See Accessory Devices in section 3.4 of the panel installation guide for a list of compatible devices.

- Four, Eight, Sixteen- and/or single-zone expansion modules
- Single-zone detectors
- Relay output expansion modules
- Graphic annunciator modules

Ordering Information

XR100 Series panels can be purchased at buy.dmp.com or by contacting Customer Service at 1-800-641-4282.
