

## 734 Wiegand Interface Module

March 2012

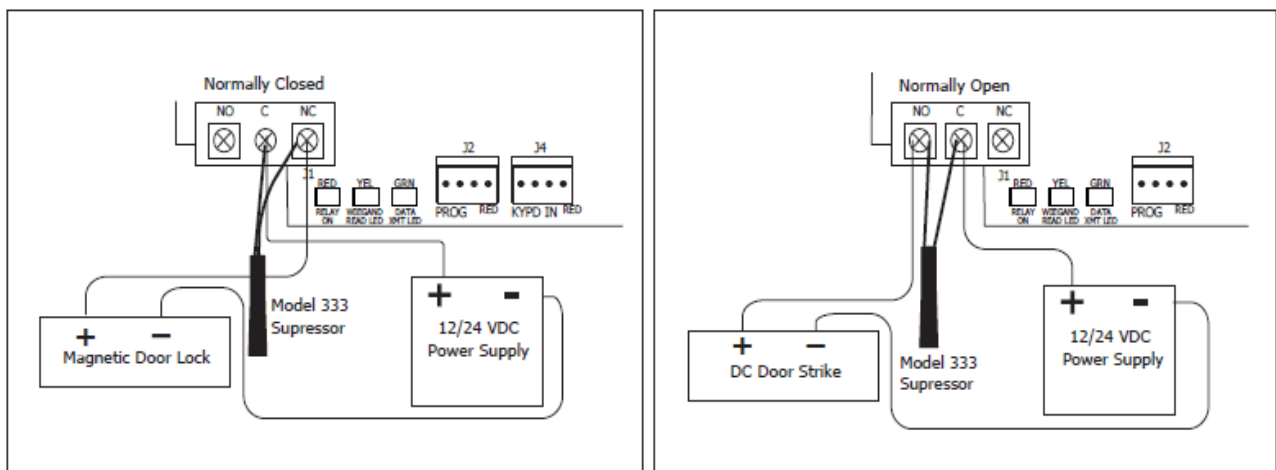

### Hardware Update

Beginning March 2012, all 734 Wiegand Interface Modules are being manufactured with updated Level C hardware.

The updated Level C hardware will begin shipping as current stock is depleted which is estimated to begin early April 2012.

### Updated Hardware

734 modules with updated Level C hardware can now operate at 12 or 24 VDC from the power supply supporting the magnetic lock or door strike. When powering from a 24 VDC power supply, use only 24 VDC Wiegand Card Readers.

The 734 module is programmable from a 32-character keypad set to address one. Programming starts as soon as the keypad is connected.

- For 12 Volt applications, connect the keypad to the module using a Model 330 4-wire harness.
- For 24 Volt applications, connect the keypad to the module using a Model 330-24V 4-wire programming harness with in-line resistor.

Note: Do not connect a keypad using a Model 330 harness if using a 24 volt power supply! Damage to the keypad could occur.

### Ordering Information

The 734 Wiegand Interface Module and Model 330-24V 4-wire harness can be purchased at [buy.dmp.com](http://buy.dmp.com) or by contacting Customer Service at 1-800-641-4282.
