Entré Security & Access Management Software
July 2010

Version 7.8 Software Update

Effective July 2010, all Entré Security & Access Management software is being manufactured as Version 7.8 (6/18/10). This version is an update from the Version 7.7.3 (2/8/10) previously shipped and contains new features.

New Features

Device Types

Entré now supports the ACCESS device type in the XR500 and XR100 panels. Previously, Entré supported only the STANDARD and FIRE device types, so any keypads installed on the system that were not being used for access control would still use a door license.

Area Schedules

Area schedules now include a closing day. This allows a daily schedule to cross the midnight boundary without the need to enter a schedule in the following day.

User Code Profile

The User Code Profile menu has been moved to the Management Menu, while Logins and Profiles have been renamed and moved to the Configuration Menu as Operators and Operator Profiles respectively. This is to reduce confusion as to which profiles are associated with the panel and which profiles are associated with the Entré software.

Time Update Request

Entré now updates time to panels automatically when the panel sends a time update request. Previously the time had to be sent to the panel manually.

Communication Paths

Entré Central Station now allows the programming of all eight communication paths in the XR500 and XR100 panels using Version 200 software or higher.

PC Log Reports

Entré Central Station now allows the programming of PC LOG REPORTS in the XR500 and XR100 panels.

Upgrading/Ordering New Firmware

Entré Security & Access Management Software Version 7.8 update may be obtained by calling DMP Customer Service at 1-800-641-4282 and ordering ENTRE/UPDATE.
