

XR100 and XR500 Series Software Update December 2007

Software Update

Effective December 2007, all XR100 and XR500 Series Command Processor™ Panels will be manufactured with Version 121 (11/8/07) software. This version is an update from the Version 120 (9/27/07) software previously shipped and contains new features.

Features

Enhanced Zone Test

A new option has been added after SIA CP-01 in System Options to allow enhanced zone test operation selection.

ENHANCED ZONE TEST: NO YES

Enhanced Zone Test

Select YES to allow enhanced zone test operation. The default is NO.

Enhanced operation allows:

- Panic Test and Walk Test functions to be restricted to operate only during an Area 32, Shift 4 schedule if programmed. If no schedule is entered, the walk test always operates.
- A Verify message to be sent at the time the zone trip occurs instead of at the end of the Walk Test. For FI, FV or SV zone types, the Verify message is sent at the initial trip. For all other zone types, the Verify message is sent when the zone restores.
- If a zone is tripped multiple times, a Verify message is sent for each trip. This allows the Central Station to record the number of devices per zone.
- The System Test Begin and System Test End Central Station messages to indicate the type of zone being tested. The System Test Begin message also includes the user name and number.

Obtaining the New Software

The XR100 and XR500 Series software update is available for download free of charge on the DMP Dealer Direct Website at <http://dmp.com/dealer>.

To allow remote programming of the new features for this XR100 and XR500 Series Version 121 software, Remote Link Version 1.40 is needed.
