

FEATURE UPDATE | SEPTEMBER 2018

Version 6.15 Update

The Virtual Keypad™ App is updated to Version 6.15 for Android and iOS devices. The following features are available.

Features

Custom Actions

The Custom Actions feature gives users deeper customization options for Z-Wave devices, such as selecting a Favorite or specific Lights, Locks, and Thermostats to activate or deactivate during specific times and days. These features can be selected in the **Actions** tab. Custom Actions are also supported on Virtualkeypad.com.

Inactive User

Virtual Keypad users can now make a user on a system inactive for a chosen amount of time while leaving their information on the system. The inactive user's credentials are saved until the user becomes active again, meaning they do not have to be re-programmed back into the panel. The Inactive User feature is supported on Virtualkeypad.com.

Temporary Schedules

In the **Schedules** tab, users are able to create temporary schedules with a specific end date. The temporary schedule starts as soon as it is created. Once the end date has passed, the schedule automatically deletes itself. Users can also control temporary schedules from Virtualkeypad.com.

Lockdown Override

Enables a person with Lockdown Override permissions in their profile to access public doors during a lockdown from either the Virtual Keypad App or Virtualkeypad.com.

Zone Bypass (iPhone Only)

In the Virtual Keypad App, you can now bypass a zone using the **Zone Status** screen.

The Virtual Keypad App is compatible with XR150/XR550 Series, XT30/XT50 Series, XTLplus Series, XTLtouch Series, iComSL Series, and CellComLTE Series hardware.
