

SCS-101 Feature Update

July 2008

Version 203 Software Update

Effective July 2008, all SCS-101 Network Interface Cards are being manufactured with Version 203 (7/9/08) software. This new version will begin shipping once existing versions are depleted from stock. This version is an update from the Version 202 (11/2/07) software previously shipped and contains a new feature.

Feature

Cellular Sequence Numbers

The SCS-101 has been enhanced to interpret sequence numbers that are attached to panel messages sent using cellular communication. This improves cellular communication by confirming each message is properly acknowledged by the receiver and that the receiver's acknowledgement is accepted by the panel.

If using cellular communication from the DMP 263G Cellular Modems or built-in XT, it is recommended that the SCS-101 Line Card be updated to software version 203 or higher.

Obtaining the New Software

SCS-101 software update version 203 (7/9/08) is available for download free of charge on the DMP Dealer Direct Website at <http://dmp.com/dealer>.
