

## 780 Software Update April 2008

### Version 102 Software Update

Effective April 2008, all 780 Keypad Demonstrator Modules are being manufactured with Version 102 (3/25/08) software. This version is an update from the Version 101 (6/22/07) software previously shipped and contains new features.

### Features

#### Thinline Icon Keypad Support

The 780 Keypad Demonstrator Module now supports the Thinline Icon Keypads. The DMP Thinline™ Series Icon Keypads offer flexible features and functionality in a stylish design. The 7300 Series provides an easy to understand icon display to assist users when arming and disarming the system or using any of the standard system features. The icons provide immediate recognition of any system alarm as well as system status. See Thinline Icon Keypad Installation Guide ([LT-0953](#)) or Thinline Icon User's Guide ([LT-0956](#)) for additional information.

#### Card Reader

The Model 7363 provides a built-in proximity reader designed to read DMP/HID proximity credentials. When a proximity credential is presented to the internal reader, a beep tone is heard to provide an audible acknowledgement of the credential read.

### Ordering the New Software

To update the software in an existing 780, return the module to DMP and simply indicate "Update to Current Version" on the RMA tag. If a module is returned for other repair needs, this update will be done automatically as a standard part of the repair. If you need RMA tags, contact DMP Customer Service at 1-800-641-4282.
