New Features

Effective September 22nd, 2021, Dealer Admin is updated to Version 2.70.0.

Scheduled Cell Activation

When a new system is pre-programmed or auto-programmed, cellular modules are automatically scheduled for activation on the panel's installation date.

1. When adding a new system, select **Auto-Programming** or **Pre-Program System**.
2. When **Install Information** pops up, select an **Installation Date**. This determines when the panel communicator's SIM is activated.
3. Choose **Cellular** as the connection type, enter the communicator's SIM number, and select **Get Status** to finish scheduling activation.
4. Finish entering required information for the new system, then select **Save**.

For more information, refer to the article "Add a System" in Dealer Admin Help.
